LIBRARY OF THE BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.

No. P. 11 of 1938.

From

B. S. PATEL, Esq.,
B.Ag., N.D.D., N.D.A., C.D.A.D.,
Director of Agriculture,
Bombay Province, Poona;

To

THE SECRETARY to GOVERNMENT,
Revenue Department, Bombay.

Poona, 14th October 1938.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay Province for the year ending 31st July 1938.

I have the honour to be,
Sir,
Your most obedient servant,

B. S. PATEL,
Director of Agriculture.

SEASON AND CROP REPORT OF THE PROVINCE OF BOMBAY FOR 1937-38.

CHAPTER I—CHARACTER OF THE SEASON.

1. **General.**—The agricultural season of 1937-38 may, in general, be considered to have been fair over a large part of the Province, except in the eastern parts of the South Deccan and the Karnatak, where it was rather disappointing particularly when it was a second bad season in succession. However, the yield of grain crops was satisfactory in the North Deccan and the Konkan. There were ample rains over most of the Province during the season under review but their distribution was uneven both as regards periodicity of fall and area. The rainfall was continuous and heavy towards the end of June, in July and September, but there was a prolonged break of about five weeks in August and the first week of September. The *kharif* season was thus characterised by irregular rainfall, which had the effect of reducing the yield of crops. The opportune rains in September and October considerably relieved the situation and improved the general condition of crops in many cases saving them from withering. These rains were also excellent for the *rabi* cultivation and encouraged *rabi* sowings and gave hopes of a good *rabi* season; but, unfortunately, the failure of later rains and the unusual mildness of the winter falsified these hopes. Besides the adverse rainfall, there were other adverse factors such as the prevalence of dry easterly winds, occurrence of cold wave, attacks of insect pests and plant diseases which affected unfavourably the yields of late crops which fell short of expectations. A large block of the country in the south of the Deccan and almost the whole of the Karnatak had deficient and very badly distributed rainfall almost throughout the season and both the *kharif* and *rabi* crops in these areas were poor.

The characteristic features of the season under review may be summarised briefly as follows:—

(*a*) Light ante-monsoon showers in the South Deccan, the Karnatak and the South Konkan.

(*b*) Fairly good rain in June over most of the Province except over the eastern portions of the Deccan and the Karnatak where it was light to moderate.

(*c*) July rains fairly abundant and widespread in the Province except the East Karnatak where it was deficient.

(*d*) Rainfall in August below normal throughout the whole reporting areas in the Province, resulting in a fairly long break.

(*e*) Fairly substantial and beneficial rain in September and October almost everywhere in the Province, although October rain was negligible in Gujarat.

(*f*) Scanty showers in the first week of November only in places in the Deccan.

(*g*) Absence of rains in other winter months and advent of cold wave in the northern parts of Gujarat in the last week of December.

(*h*) There were intermittent attacks of wilt, stem-borer, hairy caterpillars, grasshoppers, *aphis*, *koleroga* and other diseases and pests in various parts of the Province varying in extent and intensity.

Details regarding the season in its various aspects, viz., the amount and distribution of rainfall and their effect on the character of the season in the different divisions of the Province are described in the following paragraphs.

2. **Distribution of Rainfall.**—Statement I (pages 35-37) compares the rainfall during the year under review with the average fall of rain at each representative station in the Province. The average rainfall figures for each station are those supplied by the India Meteorological Department.

Kharif Rains.—In Gujarat the *kharif* rains were appreciably in excess of the average, except at Broach (Broach and Panch Mahals) where they were slightly below the normal. In the Deccan, these rains exceeded the usual amount at Nasik, Ahmednagar, Poona and the hilly tracts in the division, but fell short of the standard elsewhere. In the Karnatak, they were below the normal throughout, including the hilly tracts of the division. The *kharif* rains in the Konkan were much above the normal at Thana and Ratnagiri but were deficient at Alibag (Kolaba) and Karwar (Kanara).

Rabi Rains.—These rains were absent in the whole of Gujarat, except at Ahmedabad and Broach (Broach and Panch Mahals) where only a few cents were recorded. In the Deccan, the *rabi* rains were below the average at Dhulia (West Khandesh), Jalgaon (East Khandesh) and Poona, while moderately in excess of the normal elsewhere, including the hilly tracts in the division. In the Karnatak these rains fell short of the usual quantity at Bijapur and were about the average at Dharwar but above the standard at Belgaum and the hilly tracts in the division. In the Konkan, the rains received during this period exceeded the amount usually received at Thana and Ratnagiri but were below the normal at the remaining two stations, viz. Alibag (Kolaba) and Karwar (Kanara) in the division.

Hot Weather Rains.—These presented features of no special importance during the season under review.

Nature of the season in different divisions.

3. **Gujarat.**—There were no ante-monsoon showers in this division. The monsoon set in in the third week of June with fairly heavy rains throughout the division and provided adequate soil-moisture for sowing, which was undertaken in right earnest by the end of the month. The month of July recorded very heavy and continuous rainfall in many parts of the division and consequently

fields, especially the low-lying areas, were submerged and crops were damaged necessitating resowing in good many cases. The continuous heavy rain also caused growth of weeds and it did not give opportunities for field operations. In the other parts of the division, sowing and other field operations progressed vigorously and germinated seedlings were also in a satisfactory condition. August rainfall was, however, light which proved favourable for sowing, transplanting and other field operations and promoted healthy growth of standing crops. However, the dry period in August proved too long and although the crops in the south throve well owing to the rain received during the month, those in the north were showing signs of distress in parts. Irrigation was resorted to for rice and for transplantation of tobacco. The first week of September also passed without any appreciable precipitation. Happily rain reappeared after this and continued fairly well till the close of the month. These rains proved a turning point in the fortunes of the season, as, in fact, they gave new lease of life to the withering crops which grew with renewed vigour. Groundnut began to put forth fresh flowers, although flowering in early cotton was checked due to the revival of vegetative growth. *Bajri* and *jowar* in the northern areas, however, were damaged by the washing off of the anthers and lodging due to heavy winds. The monsoon suddenly closed at the end of September and later rains almost failed with the result that the late *kharif* crops and *rabi* crops suffered from want of adequate soil-moisture. The month of October was not only dry but excessively hot and this checked the growth of crops and marred the prospects of a good season. The *jowar* crops remained stunted and presented uneven appearance. The growth of cotton was also slow. Groundnut suffered from defective pod formation and *til* from dropping off of flowers. There was less dew-fall this season and the prevalence of cloudy weather in the early part of December resulted in the shedding of cotton flowers and bolls in some areas. To add to this, a wave of cold weather passed over the northern part of the division in the third week of December and damaged the standing crops to a varying extent. The tobacco crop which was nearing maturity was considerably damaged in the Kaira district. The young crop of castor also suffered from the same cause although the crop that was in the earhead stage was much less affected. Damage to cotton, vegetables and fruit trees varied in intensity in different localities.

Besides the frost referred to above, there were in the division a few serious pests worthy of note during the season under review. There was a slight attack of *jowar* stem-borer in parts of the Ahmedabad and Surat districts. The hairy caterpillars damaged maize, *bajri*, *til*, tobacco and pulse crops in various parts of the division. Tobacco was affected by disease in some parts of the Kaira district while *aphis* was noticed on sugarcane in places in the same district. *Lang* in the Broach and Panch Mahals district was rather seriously attacked by gram caterpillars. Mild attacks of stem-borer, boll-worm, wilt, root-rot and wooly mite on cotton were reported from several parts of the division.

North Deccan.—The ante-monsoon rains were practically absent in this division. The regular monsoon began about the middle of June and the rains being fairly substantial were availed of fully by the cultivators for sowing. The monsoon current strengthened in July and in the second half of the month fairly heavy and continuous rains were recorded all over the division. This was favourable for transplantation of rice but proved somewhat excessive in certain tracts and damaged the young crops It also encouraged the growth of weeds as the fields were rendered inaccessible for field operations. The wet weather continued in the first half of August and checked the growth of crops to some extent. The rains subsided in the latter half of August enabling the cultivators to carry out weeding, interculturing and other field operations. The dry period, however, prolonged unduly up to the end of the first week of September, which checked the growth of crops and at places the crops showed signs of withering. Rains resumed in September and being plentiful and fairly widespread gave considerable vigour to the standing crops and helped them to maturity. With moderate rains in the beginning of October the rainy season terminated, there being practically no rain over most of the division after this. Condition for *rabi* sowing was most suitable owing to the good rains received in September and early October and the *rabi* crops were sown under optimum conditions of soil-moisture, except in Jalgaon and surrounding talukas where the absence of *rabi* rains had caused deficiency of soil-moisture. Subsequent thunder storms also proved beneficial for the *rabi* crops. However, the failure of later rains and the absence of usual cold weather during the growing period were responsible for reduction in the yield of crops. The prevalence of north-easterly winds and cloudy weather had also a retarding effect on the growth of crops in some areas.

With regard to crop pests and diseases, *aphis*, grasshoppers and boll-worm on cotton, stem-borer on *jowar*, and white ants on groundnuts were reported from some places in the division. In Khandesh, wilt on cotton was not severe this year. In the Nasik district wingless grasshoppers had appeared in a few villages and damaged the *bajri* crop to some extent. There were *aphis* on lucerne, *tambera* on potatoes, leaf curl on chillies, and mildew on grapes as usual but the incidence of damage was not much. Wheat in the East Khandesh district suffered from fusarium wilt while damage to the same crop from rats was also reported from stray places. Smut on *rabi jowar* appeared as usual wherever the seeds were not treated with sulphur dust. *Aphis* and army worm attacked the crops of lucerne and *methi* in Nasik district and affected their yields. Gram was damaged by gram caterpillars in the East Khandesh district. The vegetable crops suffered from *aphis* as usual, while the growth of onion in the Nasik district was arrested by *thrips*.

South Deccan.—The rain was mostly light in the southern areas of the division during the pre-monsoon period and that received in the first half of June was also too slight to be of any

material use for sowing. The summer was hot which caused tip-burning on the sugarcane crop on the canals. Towards the end of June, however, the precipitation was favourable for sowing, although the rain in the eastern tracts being only light to moderate sowing had to be confined to places of sufficient moisture only. Rains in the first half of July were inadequate but the latter half of the month received ample and widespread rainfall in the division which considerably brightened the agricultural outlook. In fact, the rains proved somewhat excessive in the western areas. In August the rainfall was deficient almost throughout the division, particularly in the east where it was scanty or negligible in many places. The deficiency of rain was not much felt in the areas adjoining the Western Ghats as there was sufficient rain in that tract during the previous month and the crops consequently were well advanced generally. Elsewhere in the division, on the other hand, rainfall being meagre the crops were stunted and in many parts were withering. On the canal tract crops like cotton, groundnut, *bajri*, etc. had to be helped with irrigation. The anxious situation was somewhat relieved by the copious rains received in September but due to irregular rains the *kharif* season in the division was on the whole disappointing. The September rains not only helped to revive the withering crops but also stimulated *rabi* cultivation. They were further supplemented by beneficial showers in the first and the last weeks of October and the situation thus held out promise of good yields. Unfortunately subsequent unfavourable weather condition falsified these hopes there being no further rains in the division, except for a few light showers in places in December. Standing crops, especially in the eastern part of the division, showed poor development on account of prolonged absence of rain. They further suffered from a cold wave in the early part of December and from the incidence of disease in some areas. The cloudy weather in the month of December caused sugary disease on the *jowar* crop. As a combined effect of these factors the resulting yield of crops in the division was considerably reduced.

As regards crop pests and diseases, the irrigated cotton was severely attacked by green caterpillars and it was difficult to check the attack. Cotton wilt was also observed in places on the Nira Left Bank Canal. Severe heat in summer resulted in the appearance of tip-burning on sugarcane on the canal areas, while the crop was also attacked by grasshoppers and suffered damage from wild pigs in some parts. The potato crop was badly affected by *tambera* disease and potato-moth and the chilly crop by leaf curl. At places, *jowar* suffered from stem-borer and on canal from sugary disease. Peas and vegetables were affected by *aphis* and mildew in some parts.

Karnatak.—There were fairly substantial ante-monsoon showers in this division and these helped the preparations of the soil for the *kharif* sowings. The regular monsoon commenced in June and gave ample rains in the west where sowings were started vigorously. In the eastern parts of the division, however, the rainfall was rather below requirements with the result that sowings had to be confined to favourable localities. During July and August and

major part of September the rainfall was generally deficient. This meant reduction of the area under *kharif* crops in the division and the poor growth of the crops already sown. The situation was comparatively better in the west of the division where some useful rain was received during this period, although in many parts the drought condition, being unusually protracted, adversely affected the normal growth of crops and urgent rains were needed to save them from further bad effects. In the eastern part of the division, the deficiency of rain in June being followed by a long break aggravated the agricultural situation and gave cause for anxiety. Many lands were left unsown for lack of adequate soil moisture and what little was sown stood in a precarious condition. *Kharif jowar* and *bajri* could not be sown in many places and where sown the crops suffered heavily for want of rains. Pulses suffered the same fate. Early crops like *udid*, groundnut and potato gave poor yield and practically failed in the lighter soils. The deficiency of rainfall caused inadequacy of water in irrigation sources and consequently the paddy crop suffered considerably almost throughout the division. Cotton sowing was also unusually delayed. Fortunately, towards the end of September and in the beginning of October, fairly widespread rains were received in many parts of the division and these immensely benefited the surviving crops and assisted the agricultural operations. The much delayed cotton sowing was undertaken in right earnest after this rain. The rain in the latter half of October was meagre while practically no rain occurred in the month of November and as a result crops made poor growth. December brought only light showers and the rains practically ceased after December. This again caused a set-back in the growth of crops and the hopes once entertained of the success of *rabi* crops as a result of September-October rains were frustrated. The incidence of disease and prevalence of dry easterly winds further deteriorated the crops, especially in the eastern parts of the division. The season under review was thus characterised by periods of trying conditions all along and necessitated granting of remissions and suspensions in some areas and declaration of a state of "scarcity" in certain villages in the Bijapur District.

The season under review was generally free from crop pests and diseases of serious nature. Grasshoppers were reported from a few places in the division. The dry easterly winds in January and February affected the cotton crop to a considerable extent. There was wilt on Kumta cotton and the Dharwar-American variety suffered from red leaf disease in places. The late sown cotton was affected by Rhizoctonia in some areas.

Konkan.—The ante-monsoon showers were satisfactory only in the south of the division where they facilitated the preliminary field operations. Elsewhere these rains were either absent or negligible. The regular monsoon commenced in the middle of June and gave sufficient and well distributed rains for sowing. Towards the end of that month and in July the rainfall was both continuous and heavy and proved detrimental to the growth of seedlings

especially in the low-lying areas in the north. Sowing had to be rapidly done while the transplanting operations were interrupted in many areas. At places there were breaches in the bunds of rice fields. The heavy rains affected the betel-vine tract with wilt which was unusually virulent. Fortunately the rainfall received in the month of August was below the normal and being evenly distributed proved sufficient and improved the soil condition. The month of September brought good rains which proved beneficial and improved prospects of the crops almost everywhere. Early crops were nearing maturity and their harvesting was also commenced in some tracts. In October, fairly general rains were received in the first week and some light showers in the last week of the month. These considerably helped the growth of the late rice although they produced more leafy growth on mango trees and delayed their flowering. Harvesting of early varieties of rice was nearly completed without any hitch, while the intermediate and late varieties were ready for harvest and their reaping was in progress in some parts. After this the activity of the monsoon declined, there being only sporadic showers of rain at some places in the months of November and December. As a result of the seasonal conditions described above, the outturn of all crops was fairly satisfactory. Garden crops also did well generally and returned fairly normal yields except mango crop which was somewhat poor.

As regards crop pests and diseases, *koleroga* on betel-nut was reported from some parts in the Kanara district but the crop was saved to a considerable extent by spraying with bordeaux mixture. The rice crop in the Ratnagiri district suffered from *karpa* disease and *kanne* pest (black smut) and also from a severe attack of Leptispa beetles in some areas. Swarming caterpillars also did some damage to the crop in places. In a few villages in the Thana district, the rice crop was affected by stem-borer but the damage was local. There was a general outbreak of betel-vine wilt in the cold season in parts of the Thana district and also of mildew and bugs. Hoppers and mildew on mango blossoms were reported from many parts of the Thana and Kolaba districts. Wild elephants also caused damage to crops in some villages in the Kanara district.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Statement II, pages 38-43.)

4. **Number of Villages.**—The total number of villages in the Province decreased by four from 22,856½ in 1936-37 to 22,852½ during the year under report. This decline was due to three villages in Jalalpur taluka of the Surat district and one village in Newasa taluka of the Ahmednagar district being amalgamated with the adjoining villages on account of territorial changes for administrative convenience.

Total Area Reporting and Non-reporting Area.

5. **Total Area.**—This showed an expansion of 315 acres. The increase of 798 acres in the Bijapur district and of 46 acres in the Dharwar district was due to the introduction of fresh survey operations in *inam* villages, while an increase of 167 acres was noticed in the Ahmedabad district due to land having been recovered out of the river owing to *alluvial* deposits in Dhandhuka taluka. An increase of 535 acres in the Satara district, of 131 acres in the Ahmednagar district and of 99 acres in the Broach and Panch Mahals district, may be attributed to corrections in survey records. Against this, there was a decrease of 1,106 acres in the Thana district and of 355 acres in the Kanara district mostly due to corrections of mistakes in the previous survey records, especially in respect of forest areas in the latter district.

6. **Reporting Area.**—The total area for which statistics are regularly collected and reported showed a net increase of 27,000 acres. The most noticeable increase of 22,000 acres occurred in the Belgaum district due to the area being now correctly classified as "Surveyed" which was previously shown as "Unsurveyed" through mistake. The variations in other districts are small and are mostly due to corrections in survey records.

7. **Non-reporting Area.**—The variations under this head generally correspond with those under "Reporting Area" which have been referred to above and, hence, call for no remarks.

Cropped Areas.

8. **Gross and Net Cropped Areas.**—Both these areas showed an expansion as compared with the previous year. Thus, the gross cropped area increased by 512,000 acres, from 29,171 thousand acres in 1936-37 to 29,683 thousand acres during the year under report, or by 1·8 per cent.; while the net cropped area showed an increase by 561,000 acres from 28,154 thousand acres in 1936-37 to 28,715 thousand acres during the year under review, or by 2·0 per cent. Almost all the districts in the Province, except the Khandesh districts, contributed to this increase, thus reflecting the general favourable nature of the sowing rains.

9. **Twice Cropped Area.**—This, however, showed a set-back of 49,000 acres or by 4·8 per cent., as compared with the previous year, having fallen from 1,017 thousand acres to 968 thousand acres. The decrease was most marked in the North Deccan and to some extent in North Gujarat and West Karnatak where, owing to the irregular late rains of the season, it was not found possible to raise two crops. The variations in the remaining parts of the Province were small and call for no remarks.

10. **Assessed and Unassessed Area.**—The assessed area remained almost stationary as compared with the previous year, the increase being only of 6,000 acres. The unassessed area showed an increase of

21,000 acres from 274 thousand acres in 1936-37 to 295 thousand acres during the year under report or by 7·7 per cent.

11. **Temporary Cultivation in Forest Lands and Culturable Waste.**—About 144,000 acres of forest lands were given out for temporary cultivation mainly in districts of West Khandesh (37,000 acres), Ahmednagar (32,000 acres), Thana (29,000 acres), Sholapur (26,000 acres), Nasik (14,000 acres), Surat and East Khandesh (3,000 acres each); while about 93,000 acres of culturable waste mainly in districts of West Khandesh (55,000 acres), Nasik (13,000 acres), Thana (7,000 acres), Ahmednagar (5,000 acres), Belgaum (3,000 acres), Ahmedabad and Poona (2,000 acres each), and Kaira, Surat, Sholapur, Satara, Kolaba and Kanara (1,000 acres each) were similarly dealt with.

CHAPTER III—CROPPED AREA.

(Statement III, pages 44-65.)

12. **Variation in Cropped Area.**—The main features of the season and of its effects on the area and the yield of crops have been described elsewhere in the Report. Appendix B (page 30) shows the effect of the season under review on the areas sown as compared with the average (of ten years from 1921-22 to 1930-31) and with the preceding year's area under the principal crops.

13. **Food Crops.**—The area under food crops, i.e., cereals and pulses, sugarcane, and fruits and vegetables showed a rise of 227,000 acres, or 1·1 per cent., over the previous year and of 936,000 acres, or 4·7 per cent., as compared with the average. Among the *kharif* crops the area under *bajri* and rice expanded by 1,441,000 acres, or 55·7 per cent., and by 206,000 acres, or 11·3 per cent., respectively, as compared with the previous year. The big increase in the area under *bajri* was due to suitable and sufficient sowing rain over a large part of the Deccan, which is the chief *bajri* tract in the Province and also in many places in the Karnatak. The increase in the area under rice may also be attributed to the favourable and ample rains received at the time of sowing the crop, especially in North Gujarat where it was mainly noticeable. The area under *jowar*, which is grown both as a *kharif* and *rabi* crop, showed a considerable reduction of 1,868,000 acres, or 18·8 per cent., mainly in the *rabi* area, as compared with the previous year. Under the *rabi* crops, wheat showed some extension of 177,000 acres, or 10·7 per cent., over the previous year, although it showed an appreciable expansion of 408,000 acres, or 28·7 per cent., as compared with the average. The area under gram also increased by 33,000 acres, or 5·1 per cent., when compared with the area occupied by the crop during the preceding year.

14. **Non-food Crops.**—The area under non-food crops, which comprise cotton, tobacco and oilseeds, showed an expansion of 286,000 acres, or 3·3 per cent., and of 468,000 acres, or 5·5 per

cent., over the previous year and the average, respectively. The most noticeable increase was in the area under tobacco which rose by 25,000 acres, or 17·2 per cent., when compared with the previous year. The areas under oilseeds and cotton also extended, respectively, by 243,000 acres, or 11·3 per cent., and by 148,000 acres, or 4·0 per cent., as compared with the previous year, the increase under oilseeds being mainly attributable to the extended cultivation under groundnut during the year under report. The net result of these variations in the food and non-food crops, as noted above, was that the total cropped area showed a slight increase of 513,000 acres, or 1·7 per cent., as compared with the previous year, but an appreciable increase of 1,404,000 acres, or 5·0 per cent., when compared with the average.

15. **Kharif and Rabi Areas.**—The following table compares as usual, the area under the *kharif* and *rabi* crops of the year under report with those of the preceding two years :—

(Area in thousands of acres.)

Details.	1935-36.			1936-37			1937-38.		
	Cereals.	Pulses.	Total Cereals and Pulses.	Cereals.	Pulses.	Total Cereals and Pulses.	Cereals.	Pulses.	Total Cereals and Pulses.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	9,560	1,974	11,534	8,064	1,683	9,747	9,662	1,873	11,535
Rabi	7,352	961	8,313	9,376	822	10,198	7,761	885	8,646
Total ...	16,912	2,935	19,847	17,440	2,505	19,945	17,423	2,758	20,181

It will be seen from the above table that the *kharif* area during the year under review showed an increase of 1,788,000 acres over the area of the previous year (1936-37) but remained almost stationary when compared with the year previous to the last (i.e. 1935-36). The *rabi* area, on the other hand, declined by 1,552,000 acres below the last year (1936-37) but increased by 333,000 acres over the year preceding the last (i.e. 1935-36). The net result of these variations was that the total area under cereals and pulses extended by 236,000 acres or 1·2 per cent., over the previous year and by 334,000 acres or 1·7 per cent., when compared with the year 1935-36.

16. **Variations under Principal Crops.**—The detailed remarks below explain the variations under the principal crops.

Jowar and Bajri.—The sub-joined table compares the extent of variations in area under these staple crops in the different divisions of the Province :—

(Area in thousands of acres.)

Divisions.	Jowar.									Bajri.

*Average of ten years 1921-22 to 1930-31.

It will be seen from the above table that the area under *jowar* (chiefly *rabi*) fell considerably short of the previous year by 1,868,000 acres, or 18·8 per cent., although it slightly rose by 146,000 acres, or 1·8 per cent., above the average. As compared with the preceding year, the decline was general in all the divisions of the Province, but was marked in the Deccan (−1,469,000 acres) and the Karnatak (−324,000 acres) and may be attributed to unsuitable sowing rains. The area under *bajri*, on the other hand, appreciably expanded by 1,441,000 acres, or 55·7 per cent., over the previous year, although it slightly contracted by 16,000 acres, or 0·4 per cent., as compared with the average. The increase over last year was noticeable in the Deccan (+1,259,000 acres) and the Karnatak (+219,000 acres) and was, as stated before, due to suitable and sufficient *kharif* rains at the time of sowing the crop in both the divisions. Against this there was a set-back in North Gujarat (−37,000 acres) as a result of unfavourable sowing rains.

Rice.—The area under this crop expanded by 206,000 acres, or 11·3 per cent., over the previous year from 1,831,000 acres in 1936-37 to 2,037,000 acres during the year under report. The increase was general but was chiefly marked in North Gujarat (+178,000 acres) and may be attributed to ample rains at the sowing season. The Deccan (+18,000 acres), Konkan (+7,000 acres) and the Karnatak (+3,000 acres) also contributed to the increase, each district in the division sharing the small extension.

Wheat.—The area under wheat increased by 177,000 acres, or 10·7 per cent., over the previous year, although it showed an appreciable expansion of 408,000 acres, or 28·7 per cent., as

compared with the average. The increase was noticeable in Gujarat (+160,000 acres) and South Deccan (+40,000 acres) as a result of adequate rains at the time of sowing. Against this there was a decrease in the Karnatak (−14,000 acres) due to absence or deficiency of sowing rains. North Deccan also showed a small decrease of 9,000 acres.

Oilseeds.—The area under oilseeds increased by 243,000 acres, or 11·3 per cent., over the previous year but as much by 1,133,000 acres, or 90·2 per cent., as compared with the average. The groundnut crop alone (+357,000 acres) was mainly responsible for the increase during the year under review, the variations under other oilseeds being generally small.

The following table and the succeeding remarks explain the variations in area under the principal oilseeds as compared with the previous year :—

Increase or decrease in thousands of acres as compared with the last year.

Oilseeds.	Increase or decrease.
Linseed	−11
Sesamum	+33
Rapeseed and Mustard	+2
Groundnut	+357
Castor seed	−5

Groundnut.—The area under groundnut increased by 357,000 acres, or 36·2 per cent., from 987,000 acres in 1936-37 to 1,344,000 acres during the year under report. The increase was shared by all the districts in the Province almost without exception. The crop is becoming more and more popular with the cultivators every year as the raising of it requires less moisture and secures ready sale in the market.

Sesamum.—The area under this crop increased by 33,000 acres from 132,000 acres in the previous year to 165,000 acres during the year under report. The increase was shared by all the divisions in the Province except Konkan and may be attributed to the suitable rains at the time of sowing over a large part of the Province.

Castor seed.—The area under castor seed showed a slight contraction of about 5,000 acres as compared with the previous year. The decrease was noticeable in North Gujarat (−9,000 acres) and was due partly to unsuitable rains at the time of sowing and partly to extended cultivation under rice and groundnut crops. Against this there was some increase in South Gujarat (+2,000 acres), North Deccan (+1,000 acres) and East Karnatak (+1,000 acres) while in the Konkan the area remained almost stationary.

Linseed.—The area under this oilseed, which is almost exclusively a *rabi* crop and grown principally in the Deccan and the Karnatak, exhibited a set-back of about 11,000 acres as compared with the previous year. The decrease in area in both the divisions may be traced to low prices fetched by the crop during the preceding season.

Rapeseed and Mustard.—These oilseeds are of minor importance in this Province and their cultivation is mainly confined to the North Gujarat. The area under them showed a slight extension of about 2,000 acres only, from 18,000 acres in the previous year to 20,000 acres during the year under review. The small increase may be attributed to the good September rains which gave ample soil moisture at the time of sowing these crops.

Cotton.—The area under cotton showed an expansion of 148,000 acres from 3,714,000 acres in the previous year to 3,862,000 acres during the year under report, or by 4·0 per cent. The increase was noticeable in the Deccan (+188,000 acres) and the Karnatak (+187,000 acres) due to favourable rains at the sowing period in the former division and owing to less area being put under food-grain crops such as wheat, gram and *rabi jowar* in the latter division. Against this there was a decrease in Gujarat (−227,000 acres) as a result of extended cultivation under rice and groundnut.

Sugarcane.—The area under this crop contracted by 13,000 acres or 15·5 per cent., from 84,000 acres in the previous year (1936-37) to 71,000 acres during the year under review. All the divisions in the Province showed this decline which may be attributed partly to insufficient water supply at the time of planting and partly to low prices of *gul* prevailing during the last season.

Tobacco.—The area under tobacco extended by 25,000 acres, or 17·2 per cent., as compared with the previous year. The increase was general in all the districts of the Province but was marked in Kaira (+12,000 acres) and Belgaum (+7,000 acres) districts due partly to favourable sowing rains but chiefly to good prices of the commodity fetched in the market.

Fruits and Vegetables.—The area under these showed a net decline of only about 500 acres in the Province as compared with the previous year, although there were internal variations in each division, viz., Gujarat (+1,400 acres), Deccan (−2,700 acres), Karnatak (−1,200 acres) and Konkan (+2,000 acres).

Appendix C (pages 31-33) shows, as usual, the distribution (in each district of the Province) of the principal food and non-food crops in terms of percentage of the gross area cropped.

CHAPTER IV—IRRIGATED AREA.

(Statements IV, IV-A and IV-B, pages 66-83, 84-87 and 88-89.)

18. **Variations in the Irrigated Area and Crops.**—Appendix D (page 34) exhibits variations under the several heads of irrigation and crops irrigated as compared with similar details of the previous year.

19. **Area Irrigated.**—This showed a set-back of 11,000 acres, or 1·0 per cent., only as compared with the previous year, having declined from 1,106,000 acres in 1936-37 to 1,095,000 acres during the year under review. The decrease was marked in South Deccan (−43,000 acres). Against this there was some increase in North Gujarat (+26,000 acres) and the Karnatak (+7,000).

20. **Area Irrigated from different Sources of Irrigation Government Canals.**—The area irrigated under Government canals showed a net expansion of 5,000 acres, or 1·9 per cent., only, although large internal variations were noticed in Gujarat and the Deccan. There was increase in North Gujarat (+27,000 acres), where owing to long breaks in the middle of the season and failure of late rains the cultivators had to resort to this important source of irrigation. Against this there was decrease in the South Deccan (−24,000 acres), and mainly in the Ahmednagar District (−21,000 acres), as a very large area was brought under canal irrigation in this district during the preceding year (1936-37) on account of scarcity conditions then prevailing.

Private Canals.—Irrigation from private canals showed an advance of 14,000 acres or 23·7 per cent., having increased from 59,000 acres in the previous year to 73,000 acres during the year under review. Almost the whole of the increase was noticed in the Deccan, but the variations in each district being generally small call for no special remarks. In the Karnatak and the Konkans, irrigation by private canals remained almost stationary, while in Gujarat irrigation from this source was practically absent.

Wells.—Well irrigation showed a set-back of 62,000 acres, or 9·3 per cent., as compared with the previous year. The decrease was shared by all the divisions in the Province but was mainly noticeable in North Gujarat (−23,000 acres) and the Deccan (−34,000 acres), as owing to the scarcity conditions prevailing in certain parts during the previous year (1936-37) extensive areas in these divisions were assisted by this labourious and expensive method of irrigation.

Tanks.—The area irrigated by tanks extended by 33,000 acres, or 41·2 per cent., having increased from 80,000 acres in the previous year to 113,000 acres during the year under report. The increase occurred chiefly in the Ahmedabad District (+20,000 acres) in Gujarat and in the Dharwar District (+9,000 acres) in the Karnatak, where owing to the indifferent rains of the season it was found necessary to utilise this source of water supply to a wider extent to help the crops.

Other Sources.—The area under irrigation from "Other Sources" showed a fall of about 500 acres only, having declined from 40,700 acres in the previous year to 40,200 acres during the year under report. The small decrease was shared by all the divisions of the Province.

21. **The ratio of the total irrigated area to the net cropped area.**—This was 3·8 per cent., during the year under review. Out of this, Government canals shared 0·9 per cent., private canals 0·3 per cent., wells 2·1 per cent., tanks 0·4 per cent., and other sources of irrigation 0·1 per cent.

22. CROPS IRRIGATED.

Jowar.—The area under irrigated *jowar* declined by 54,000 acres, or 18·6 per cent., as compared with the previous year. The decrease occurred mostly in the Deccan (−49,000 acres) and exclusively in the South of the division. This was in sympathy with the reduction in the total area under the crop in this part of the division where, as stated elsewhere, less area was brought under the cultivation of this crop. North Gujarat (−5,000 acres) also contributed to the decrease.

Bajri.—Irrigated *bajri* on the other hand, showed an expansion of 4,000 acres, or 8·0 per cent., over the previous year. The increase was noticeable mainly in the Deccan (+6,000 acres) where, as stated before, there was an appreciable extension in the total area under the crop. Against this there was a small decrease in Gujarat (−2,000 acres) due to more area being put under the rice crop.

Rice.—The area under irrigated rice extended by 70,000 acres, or 5·1 per cent., as compared with the previous year. The increase was general in all the divisions of the Province, but was specially marked in North Gujarat (+51,000 acres), where owing to indifferent rains and prolonged drought in the middle of the season more use of the irrigation facilities had to be made to provide the crop with sufficient moisture. The Deccan (+5,000 acres), the Karnatak (+10,000 acres) and the Konkan (+3,000 acres) also contributed to the increase, but variations in the different districts being small call for no remarks.

Wheat.—Irrigated wheat also showed an expansion of 15,000 acres, or 8·0 per cent., when compared with the previous year, having advanced from 186,000 acres in the preceding year to 201,000 acres during the year under report. The increase was marked in almost all the districts in the Deccan (+21,000 acres), where due to deficiency of late rains it was found necessary to help the crop with irrigation.

Cotton.—The area under irrigated cotton showed a set-back of 9,000 acres, or 17·6 per cent., as compared with the previous year. Almost the whole of the decrease was noticed in Gujarat (—11,000

acres), where owing to suitable rains the crop had sufficient moisture to fall back upon and did not require any artificial water supply. Against this there was some increase in the Karnatak (+2,000 acres).

Sugarcane.—As already noted when dealing with the crop in Chapter III, the decrease of some 13,000 acres, or 15·9 per cent., in the area under sugarcane during the year under review was general in all the districts of the Province and may be attributed to the low prices of *gul* ruling during the last season.

23. **Number of Wells for Irrigation.**—The quinquennial enumeration of the number of irrigation wells in the Province became due in 1937-38 and it was accordingly taken during the year under report. The details regarding it are given in Statement IV-B (pages 88-89) and are summarised in Appendix E (page 34).

The number of wells for irrigation, both masonry and non-masonry (i.e. *pukka* and *kacha*) taken together, shows an increase of 16,788 (the figure being 317,100 during the year under report as against 300,312 in 1932-33), or 5·5 per cent. during the last five years. The increase is general in all the divisions of the Province, but most marked in the Deccan (+10,304), the Konkan (+3,291) and the Karnatak (+2,991) also contributed to the increase.

Masonry Wells.—The number of masonry wells increased by 8,355 having risen from 194,240 in 1932-33 to 202,595 during the year under review, or 4·3 per cent. during the last quinquennium. The increase was contributed by all the divisions in the Province, but noticeably by the Deccan (+6,045), the Konkan (+1,561), the Gujarat (+581) and the Karnatak (+168) sharing to some extent. The rise in the number may be attributed to (1) the conversion of " non-masonry " wells to " masonry " wells, (2) the disused wells being brought into use and (3) the construction of new wells under the village improvement scheme as a precautionary measure against deficiency of water supply.

Non-Masonry Wells.—These also show an increase of 8,433 in number, from 106,072 in 1932-33 to 114, 505 during the year under report, or 8·0 per cent. during the last five years. As in the case of non-masonry wells, the increase under these is also general but is noticed chiefly in the Deccan (+4,259), the Karnatak (+2,823) and the Konkan (+1,730). The rise is due to the same causes which brought about an increase in the number of masonry wells, viz., bringing into use the disused wells and constructing new wells. Against this, Gujarat (—379) shows a small decrease.

CHAPTER V—OUTTURN OF CROPS.

(Statements V and V-A, pages 90-91 and 92-106.)

24. **Yield of Principal Crops.**—Statement V (pages 90-91) shows the estimated yield of the principal *kharif* and *rabi* crops, taking 100 as representing the normal. It is prepared from the district estimates which are returned in annas on the basis of twelve annas denoting the normal crop. The figures are, therefore, only approximate. The character of the season has already been described elsewhere in the Report.

25. **Outturn of Crops in parts of the normal—**

A—Kharif Crops—

Jowar.—The outturn of *kharif jowar* was only 58 per cent. of the normal in the Broach and Panch Mahals district in Gujarat and the Belgaum and Dharwar districts in the Karnatak due to prolonged drought in the middle of the season. It ranged between 60 and 67 per cent. of the normal in the Ahmedabad district in Gujarat and the Poona and Satara districts in the Deccan, between 70 and 75 per cent. of the normal in the Kaira district in Gujarat and the Kanara district in the Konkan. It rose to about 83 per cent. of the normal in the Surat district in Gujarat, the West Khandesh and Nasik districts in the Deccan and to 92 per cent. of the normal in the East Khandesh district as a result of good rains in September.

Bajri.—The yield of the crop fell down to half the normal in the Belgaum district and to 58 per cent. of the normal in the Dharwar district, while it was definitely poor in the Bijapur district in the Karnatak, being only 25 per cent. of the normal, as a result of deficient rains of the season. It varied from 59 to 69 per cent. of the normal in the Poona and Satara districts in the Deccan and the Ahmedabad district in Gujarat. The outturn of the crop ranged between 74 and 83 per cent. of the normal in the Kaira and Surat districts in Gujarat and the West Khandesh, East Khandesh, Nasik and Ahmednagar districts in the Deccan. It was, however, very low in the Broach and Panch Mahals in Gujarat, being less than half the normal, due to uneven distribution of the rain which showed, excess in June and July and deficiency in August. It was also very low in the Sholapur district in the Deccan due to long drought in the growing period.

Rice.—The yield of the crop ranged between 83 to 97 per cent. of the normal in the Ahmedabad, Surat, Nasik, Thana, Bombay Suburban and Ratnagiri districts, while it somewhat exceeded the normal in the Kolaba district. The outturn of the crop in other parts of the Province varied from 50 to 76 per cent. of the normal except in the Bijapur and Dharwar districts in the Karnatak where it came to only 38 and 42 per cent., respectively, of the normal as a result of the deficiency of rain.

Cotton.—The outturn of the late varieties of cotton was only 43 per cent. of the normal in the Belgaum district and 58 per cent. of the normal in the Dharwar district, but it was decidedly poor in the Bijapur district where the crop suffered seriously from unfavourable rain and weather conditions. In Gujarat the yield ranged between 63 and 67 per cent. of the normal in Surat and Ahmedabad districts, and between 75 and 81 per cent. of the normal in the remaining parts of the division. In the Deccan, where early varieties of cotton are generally cultivated, the outturn of the crop varied from 58 to 68 per cent. of the nornal in the southern parts of the division, while it ranged between 75 and 83 per cent. of the normal in the Khandesh and Nasik districts. As regards the actual outturn of the crop, as estimated by the number of bales, it may be stated that so far as area factor is concerned it showed an increase of 1,83,000 acres or 3·1 per cent. when compared with the previous year. Thus, the total area in the Province, including Indian States, stood at 6,174,000 acres during the year under report against 5,991,000 acres in the preceding year (1936-37). The outturn also increased by 93,000 bales, or 8·3 per cent., over the previous year, i.e. from 1,120,000 bales to 1,213,000 bales. The increase may be attributed to adequate rains at the sowing season and favourable rain and weather conditions during the growing period of the crop. Of this outturn of 1,213,000 bales, 368,000 bales, or 30·4 per cent., represented the yield of long stapled cotton, viz., Broach, Dharwar and Kumta varieties, while the remaining 845,000 bales, or 69·6 per cent. belonged to the short stapled varieties of North Gujarat, Western India States Agency and Khandesh. As compared with the previous year, the outturn of the long stapled cotton fell by 0·1 per cent. while that of the short stapled varieties rose by 12·4 per cent.

Sesamum.—This oilseed yielded between 47 and 58 per cent. of the normal in the Kaira district in Gujarat, in the Belgaum and Dharwar districts in the Karnatak, and the Poona, Ahmednagar and Satara districts in the Deccan, while its outturn ranged between 67 and 75 per cent. of the normal in the Ahmedabad and Surat districts in Gujarat, the West Khandesh, and East Khandesh districts in the Deccan and the Kanara district in the Konkan. The yield of the crop was very poor being only 25 per cent. of the normal in the Bijapur district and 42 per cent. of the normal in the Sholapur district due to deficient soil moisture. On the other hand it rose to about 83 per cent. of the normal in the Broach and Panch Mahals, Nasik, Thana and Ratnagiri districts, while it reached the full normal in the Kolaba district.

26. **B. Rabi Crops.**

Jowar (Rabi).—The *rabi jowar* yielded only half the normal in the Ahmedabad and Broach and Panch Mahals districts in Gujarat, due to absence or deficiency of late rains in the season. The outturn of the crop ranged between 58 and 76 per cent. of the normal in the West Khandesh, Satara, Ahmednagar, and Poona districts in the Deccan, while it rose to about 83 per cent. of the normal in the Surat (where the area is limited) and Nasik districts. The yield of the crop, on the other

hand, fell to only 43 and 25 per cent. of the normal, respectively, in the Sholapur and Bijapur districts as a result of unsatisfactory character of rains during the season.

Wheat.—The yield of wheat crop was only 42 per cent. of the normal in the Belgaum and Dharwar districts and as low as 17 per cent. of the normal in the Bijapur district as the crop suffered seriously due to insufficient soil-moisture as a result of scanty rains. It ranged between 55 and 63 per cent. of the normal in the Kaira and Poona districts and varied from 67 to 77 per cent. of the normal in the remaining parts of the Province, except in the Nasik district, where it came up to about 84 per cent. of the normal.

Gram.—The outturn of gram was only half the normal in the Broach and Panch Mahals, Sholapur and Belgaum districts, between 58 and 68 per cent. of the normal in the Dharwar, Ahmednagar, Poona, Kaira, Kanara and Ahmedabad districts, between 70 and 77 per cent. of the normal in the Surat, West Khandesh, East Khandesh and Satara districts. It rose to 84 per cent. of the normal in the Nasik and Thana districts, while in the Kolaba and Ratnagiri districts almost a full normal yield could be secured. In the Bijapur district the crop failed and yielded only 25 per cent. of the normal

Tobacco.—The outturn of the crop ranged between 50 and 68 per cent. of the normal in the Dharwar and Belgaum districts in the Karnatak, the Sholapur, Ahmednagar and Poona districts in the Deccan, the Ahmedabad and Broach and Panch Mahals districts in Gujarat and the Ratnagiri district in the Konkan, and between 74 to 79 per cent. of the normal in the Kaira, East Khandesh and Satara districts. In the Surat, West Khandesh and Nasik districts the yield of the crop came up to about 83 per cent. of the normal, while it was definitely poor in the Bijapur district being only 25 per cent. of the normal as the crop suffered seriously from deficient soil-moisture.

Linseed—The cultivation of this oilseed is almost exclusively confined to the Deccan and the Karnatak. In the former division the outturn of the crop came to 50 per cent. of the normal in the Poona and Sholapur districts, to 67 per cent. of the normal in the West Khandesh, East Khandesh, Nasik and Satara districts and to 75 per cent. of the normal in the Ahmednagar district. In the latter division (viz. Karnatak) the crop yielded about 58 per cent. of the normal in the Belgaum and Dharwar districts, but about 25 per cent. of the normal in the Bijapur district.

Rapeseed and Mustard.—These oilseeds gave an outturn of only half the normal in the Ahmedabad district in Gujarat. Their yields varied from 67 to 83 per cent. of the normal in the Kaira and Surat districts, while in the Broach and Panch Mahals district the outturn fell down to about 42 per cent. of the normal.

Sugarcane.—The outturn of sugarcane ranged between 50 and 58 per cent. of the normal in the Bijapur and Dharwar districts, while it varied from 73 to 83 per cent. of the normal in the

remaining districts of the Province, except the West Khandesh, Nasik, Sholapur, Satara and Ratnagiri districts, where the crop gave an yield of about 92 per cent. of the normal.

Outturn in Tons of Food-grain.

27. **Crops.**—Statement V-A (pages 92-106) compares the acreage under food grain crops (Cereals and Pulses) in each district of the Province and their approximate outturn in tons during the year under report with similar statistics for the two preceding years. The following table sums up the results :—

Division.	Area in thousands of acres.			Outturn in thousands of tons.		
	1935-36.	1936-37.	1937-38.	1935-36.	1936-37.	1937-38.
	Acres.	Acres.	Acres.	Tons.	Tons.	Tons.
Gujarat	2,466	2,126	2,453	753	485	692
Deccan	11,121	11,219	11,246	2,070	1,805	1,748
Karnatak	4,657	4,995	4,867	831	780	631
Konkan	1,603	1,605	1,615	656	605	678
Total, Bombay Province ...	19,847	19,945	20,181	4,315	3,675	3,749

It will be seen from the above table that both the area and outturn of the food-grain crops rose by 1·2 per cent. and 2·0 per cent., respectively, as compared with the previous year, thus showing that the season under review was on the whole fairly satisfactory over a large part of the Province, particularly in Gujarat, the North Deccan and the Konkan. Although the area under the plough in the Deccan was larger than the previous year, there was reduction in the yield due to the unfavourable character of the season particularly in the southern parts of the division.

CHAPTER VI—PRICES, TRADE AND STOCK.

(Statement VI, pages 107-109.)

28. **Prices of Principal Articles.**—Statement VI—Prices—shows the retail prices of the principal staples and of fodder, ruling at the harvest time at each district headquarters station in the Province. The following remarks show variations in the prices of the principal articles as compared with those during the previous year.

Jowar.—The price of *jowar* ruled dearer by three-tenth of a seer to one and one-fourth seer per rupee at Bijapur in the Karnatak and Ahmedabad in the Gujarat. At the remaining stations of the Province, the price of jowari ruled cheaper by nearly one-eighth of a seer to one and three-fourth seer per rupee at Surat in Gujarat, Dhulia (West Khandesh), Poona, Sholapur and Jalgaon (East Khandesh) in the Deccan, Belgaum and Dharwar in the Karnatak and Ratnagiri and Karwar (Kanara) in the Konkan and from two and one-fourth seers to three and half seers at Broach and Kaira in Gujarat and Satara in the Deccan, except at Ahmednagar and Nasik in the Deccan, where the price of the article ruled still cheaper from four and one-eighth of seers to nearly six seers per rupee.

Bajri.—The price of *bajri* ruled dearer by one-eighth of a seer to three and one-fifth seers per rupee at all stations in Gujarat, Poona and Jalgaon (East Khandesh) in the Deccan, Belgaum and Dharwar in the Karnatak and Thana in the Konkan, while at other stations in the Province it ruled easier by one-eighth of a seers to three and half seers per rupee.

Wheat.—The price of *wheat* ruled cheaper by one-fourth of a seer to two and half seers per rupee at Broach, Godhra (Panch Mahals), Kaira and Ahmedabad in Gujarat, all stations in the Deccan and Karwar (Kanara) in the Konkan, while it ruled dearer by one-half seer to one and one-fifth seer per rupee at all stations in the Karnatak and Alibag (Kolaba) and Ratnagiri in the Konkan. At the remaining stations of the Province, viz., Surat in Gujarat, and Thana in the Konkan, the price of the article remained almost stationary.

Rice.—With the exception of few stations, viz., Surat, Ahmedabad, Kaira in Gujarat, Belgaum in the Karnatak and Thana in the Konkan, where the price of rice ruled cheaper by one-eighth of a seer to one and three-fourth seer per rupee, it ruled dearer by one-eighth of a seer to four-fifth of a seer per rupee at Godhra (Panch Mahals) and Broach in Gujarat, all stations except Ahmednagar in the Deccan, Dharwar in the Karnatak, Alibag (Kolaba) and Karwar (Kanara) in the Konkan, while at Satara it ruled still dearer by two and three-fifth seers per rupee. At the remaining stations in the Province, viz., Ahmednagar in the Deccan, Bijapur in the Karnatak and Ratnagiri in the Konkan, the price of the article remained stationary.

Gram.—With the exception of Thana in the Konkan, where the price of gram remained stationary, it ruled dearer by one-fifth of a seer to nearly one and two-fifth seers per rupee at Surat in Gujarat, Poona, Dhulia (West Khandesh) and Jalgaon (East Khandesh) in the Deccan, Belgaum and Dharwar in the Karnatak and Ratnagiri and Karwar (Kanara) in the Konkan. On the other hand, the price of the article ruled easier by one-fourth of a seer to nearly two seers per rupee at Ahmedabad and Broach in Gujarat, Satara, Sholapur, Ahmednagar and Nasik in the Deccan, Bijapur in the Karnatak and Alibag (Kolaba) in the Konkan, while it ruled still easier by two and three-fourth seers to nearly four seers per rupee at Godhra (Panch Mahals) and Kaira in Gujarat.

Tur Dal.—The price of *tur-dal* ruled higher by one-fifth of a seer to two and four-fifth seers per rupee at all district headquarter stations in the Province, except at Ahmedabad in Gujarat, and Thana in the Konkan where it remained stationary.

Gul.—The price of *gul* ruled dearer by one-fourth of a seer to nearly three and one-third seers per rupee in the Deccan, Karnatak and Konkan, except at Godhra (Panch Mahals) and Surat in Gujarat, Jalgaon (East Khandesh) in the Deccan, Belgaum in the Karnatak and Thana in the Konkan, where the price remained stationary. On the other hand, the price of the article ruled easier by nearly two-fifth of a seer to one and three-fifth seer per rupee at Kaira, Ahmedabad and Broach in Gujarat and Nasik in the Deccan.

Tobacco.—The price of tobacco ruled cheaper from one-eighth of a seer to one-half seer per rupee at Godhra (Panch Mahals) in Gujarat, Sholapur and Satara in the Deccan, while it remained almost stationary at Ahmedabad, Kaira, Broach and Surat in Gujarat, Jalgaon (East Khandesh) in the Deccan, and all stations in the Karnatak and the Konkan. At the remaining stations in the Province the price of the article rose from one-fourth of a seer to four-fifth of a seer per rupee.

Cotton.—The variations in the area and outturn of this crop as compared with the figures of the last year, have already been noted in the respective chapters and need not be repeated here. The following table compares the prices of the article during the year

under report with those of the previous year (1936-37) and the average of the preceding five years :—

Variety.	Price per bale of 400 lbs.			Variations.	
	Average of the five years ending 1936.	Average of the seven months ending 31st July.		Compared with the average in column 2.	Compared with the prices in 1937.
		1937.	1938.		
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach	109	118	83	- 23·8	- 29·7
Khandesh	95	106	70	- 26·3	- 33·9
Kumpta*	Not available.	131	100	Not available.	- 23·7

*As it was not found possible to quote the prices of "Saw-Ginned Dharwar" cotton, this variety being more or less non-existent from the trade point of view, "Kumpta" cotton has been substituted since 1936-37. The prices of this variety for the previous years, however, are not available.

Converting the above figures into prices per *khandi* (of 784 lbs.) they are as follows :—

Variety.	Price per *khandi* of 784 lbs.			Variations	
	Average of the five years ending 1936.	Average of the seven months ending 31st July		Compared with the average in column 2.	Compared with the prices in 1937.
		1937.	1938.		
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach ...	214	232	163	- 23·8	- 29·7
Khandesh ...	186	207	137	- 26·3	- 33·8
Kumpta* ...	Not available.	257	196	Not available.	- 23·7

* As it was not found possible to quote the prices of "Saw-Ginned Dharwar" cotton, the variety being more or less non-existent from the trade point of view "Kumpta" cotton has been substituted since 1936-37. The prices of this variety for the previous years, however, are not available.

It will be seen from the above table that the prices of all the three varieties, viz., Broach, Khandesh and Kumpta, fell below the previous year. In fact, the prices of the two varieties, viz., Broach and Khandesh, have been, during the year under report, only about three-fourth of what they were on an average during the quinquennium ending 1936. It is important, however, to remember that the cotton prices were, as usual, very sensitive to fluctuations in foreign markets. The actual fluctuations will be seen from the following statement which shows the prices in rupee per *khandi* of Broach cotton at Bombay during the year under report :—

Year and month.	Price per *khandi* of 784 lbs.	Year and month.	Price per *khandi* of 784 lbs.
1937.	Rs.	1938.	Rs.
August ...	191	January ...	160
September ...	176	February ...	183
October ...	154	March	174
November ...	149	April	165
December ...	157	May	158
.....	.....	June	149
.....	.....	July	155

Dry Grass.—The price of dry grass ruled dearer by nearly an anna to six annas per Indian maund at Surat and Godhra (Panch Mahals), Jalgaon (East Khandesh) in the Deccan and Belgaum in the Karnatak. On the other hand, it ruled cheaper by about an anna to eight and half annas per Indian maund at Ahmedabad and Broach in Gujarat, Dhulia (West Khandesh), Nasik, Poona and Satara in the Deccan. At the remaining stations in the Province the price of the article remained stationary.

Jowari Kadbi.—The price of *jowari kadbi* ruled cheaper by nearly an anna to about five annas per Indian maund at Ahmedabad, Kaira and Surat in Gujarat, Sholapur and Poona in the Deccan, while it ruled still easier by about seven annas to twelve annas at Satara and Ahmednagar in the Deccan. On the other hand, the price of the article rulled higher by one hand and one-third anna at Nasik in the Deccan, while it rose still higher by fifteen annas at Jalgaon (East Khandesh). At the remaining stations in the Province the price of the article remained almost stationary. In the Konkan, where rice-straw is used in place of *jowari kadbi* the price of rice-straw was cheaper by two and half annas per Indian maund at Alibag (Kolaba) while it was dearer by one and one-third anna at Ratnagiri. At the remaining stations in the division, viz., Thana and Karwar (Kanara), the price of the article remained stationary.

CHAPTER VII—AGRICULTURAL STOCK.

29. Information under this head is collected only once in five years. The result of the last enumeration has been published in the Season and Crop Report of the Province for the year 1934-35.

CHAPTERS VIII AND IX.

Condition of the Agricultural Population.

30. As already stated in Chapter I of the Report, the season under review, from the agricultural standpoint, was on the whole fairly satisfactory over a large part of the Province. The only exceptions were a small block of the country comprising the eastern parts of the South Deccan and the Karnatak, where the rainfall of the season was deficient on the whole, and what was received, was irregular in distribution both as regards area and period. This led Government to declare existence of "Scarcity" conditions in some of these parts. Government also granted remissions and suspensions and distributed tagai loans on a liberal scale to relieve the distressing situation.

31. So far as the supply of food grain crops to the general population is concerned, the year under report may be regarded as slightly better on the whole than its predecessor. Because, whereas the area under plough was in excess of the preceding year by only 1·2 per cent. the resulting yield increased by 2·0 per cent. over the previous year, as will be seen from the following statement:—

Division.	Area in thousands of acres.		Estimated outturn in thousands of tons.	
	1936-37.	1937-38.	1936-37.	1937-38.
	Acres.	Acres.	Tons.	Tons.
Gujarat	2,126	2,453	485	692
North Deccan	3,807	3,714	714	748
South Deccan	7,412	7,532	1,091	1,000
Karnatak	4,995	4,867	780	631
Konkan	1,605	1,615	605	678
Total, Bombay Province ...	19,945	20,181	3,675	3,749

The table indicates that the yield of food crops has been fairly satisfactory in Gujarat, the North Deccan and the Konkan. The unfavourable character of the season in the southern parts of the Deccan is reflected in the drop in estimated outturn, not withstanding some increase in the total area sown. The reduction in yield in the case of the Karnatak was due partly to the decrease in sown area and partly to the unsatisfactory nature of the season in the division.

32. As regards prices of agricultural produce, the slump conditions continued during the year under review, the prices of all commodities showing a downward tendency. This may be evinced from the sub-joined table.

Prices prevailing at harvest time for agricultural produce in seers of 80 tolas per rupee except for cotton which are recorded in rupees per khandi of 784 lbs.

Articles.	Centre.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.
A—Food Crops.		Seers.	Seers.	Seers.	Seers.	Seers.

Bajri	Nasik ...	12	11	13	11	11
Rice	Thana ...	9	9	8	7	9
B—Export Crops.						
Wheat ...	Ahmedabad ...	11	11	8	7	10
Groundnut ...	Karad ...	17	18	13	10	14
		Rs.	Rs.	Rs.	Rs.	Rs.
Cotton ...	Bombay (Broach) .	207	261	207	234	163

33. The condition of cattle was generally satisfactory. For although rinderpest and foot and mouth diseases appeared as usual in some districts, nowhere did they assume such a serious aspect as to interfere with the agricultural operations. Supply of fodder and drinking water was generally sufficient except in parts of South Deccan and the Karnatak.

34. Wages of agricultural labour remained generally the same as in the previous year.

35. The general economic condition of the agriculturists showed scarcely any improvement as their purchasing power had gone down due to trade depression and slump in prices, of agricultural produce.

B. S. PATEL,
Director of Agriculture.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY

No. P. 11 of 1939.

From

W. J. JENKINS, Esq.,
M.A., B.Sc., C.I.E., I.A.S.,
Director of Agriculture,
Bombay Province, Poona;

To

THE SECRETARY to GOVERNMENT,
Revenue Department, Bombay.

Poona, 12th October 1939.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay Province for the year ending 31st July 1939.

I have the honour to be,
Sir,
Your most obedient servant,

W. J. JENKINS,
Director of Agriculture.

SEASON AND CROP REPORT OF THE PROVINCE OF BOMBAY FOR THE YEAR 1938-39.

CHAPTER I—CHARACTER OF THE SEASON.

1. **General.**—The agricultural season of 1938-39, considering the *kharif* and *rabi* seasons together, was, on the whole, fairly satisfactory, and proved better than its predecessor. The only exception to the above general statement was found in the north Gujarat district where the season proved disappointing. Throughout the season the rainfall in this area was deficient and, accordingly, the crops were adversely affected. The out-standing feature of the season was the early arrival of the monsoon rains which strengthened rapidly and resulted in heavy precipitation in the early part of the *kharif* season. As a result, field operations were somewhat hampered and the progressive growth of early sown crops was arrested. Moderate rains with occasional breaks occurred during the months of August and September facilitated the orderly progress of field operations while establishing ideal conditions for the growth of standing crops. At this period, the monsoon conditions gave hopes of very satisfactory *kharif* crop harvests and good yields appeared to be certain. However, the heavy rains which fell at the end of September and in the beginning of October, caused considerable damage to the standing crops which were nearing maturity at that time. These inopportune and excessive rains had the effect of reducing considerably the anticipated favourable crop returns for the *kharif* season. For the *rabi* crops, however, the late rains proved beneficial though sowing operations were delayed by about a fortnight owing to excess of rainfall. These crops made good progress but the subsequent absence of favourable rains after October had a somewhat adverse effect on their outturn.

The characteristic features of the season under review may be summarised briefly as follows :—

(*a*) Fairly good ante-monsoon showers over the whole of the Province.

(*b*) Rainfall in June in excess of the normal over most of the Province except in the eastern areas of the South Deccan and the Karnatak where it was somewhat below normal.

(*c*) July rainfall fairly general and wide-spread in the Province except in the east Karnatak where it was deficient.

(*d*) August rainfall fairly substantial and wide-spread over most of the Province except in the North Gujarat, in parts of the Karnatak and in the south eastern portion of the Deccan, where it was short of crop requirements.

(*e*) Rainfall in September fairly abundant over most of the reporting areas of the Province except in north Gujarat where it was remained in deficit.

(*f*) October rainfall was confined to the first ten days of the month, was heavy in the Deccan and Konkan, fairly substantial in south Gujarat and moderate elsewhere.

(*g*) Rainfall in November also occurred during the first ten days of the month and was fairly substantial in the Konkan, lightly moderate in parts of the Deccan and the Karnatak but absent elsewhere in the Province.

(*h*) Absence of rain in the Province in December and subsequent winter months except for some light and irregular showers in a few places.

(*i*) There were, as usual, intermittent attacks of wilt, wooly mite, *koleroga*, stem-borer, field rats, grasshoppers, *aphis* and other plant diseases and insect pests in various parts of the Province varying in extent and intensity.

Details regarding the season in its various aspects, viz., the amount and distribution of rainfall and their effect on the character of the season in the different divisions of the Province are described in the following paragraphs.

2. **Distribution of Rainfall.**—Statement 1 compares the rainfall during the year under review with the average annual fall of rain at each representative station in the Province. The average rainfall figures for each station have been supplied by the India Meteorological Department.

Kharif Rains.—The *kharif* rains in Gujarat were considerably below the average except at Surat, where they were slightly in excess of the normal. In the Deccan, these rains exceeded the normal precipitation except at Nasik and Satara where they were somewhat below the average. In the Karnatak, they were below the normal except at Bijapur where they were almost double the average. In the Konkan, the rainfall at Thana was almost equal to the average while at Alibag (Kolaba) and Ratnagiri they were in excess and at Karwar (Kanara) much below the normal.

Rabi Rains.—*Rabi* rainfall in Gujarat was much below the normal except at Godhra and Broach (Broach and Panchmahals where it was in excess of the average). In the Deccan, the rainfall in the *rabi* season was far below the normal at Sholapur but, elsewhere in the division, it was much in excess of it. In the Karnatak, rains fell short of the usual quantity at all recording centres, the rainfall at Bijapur and Dharwar being markedly deficient. In the Konkan, the rains during this period were very heavy except at Karwar (Kanara) where they were only moderately in excess of the average.

Hot Weather Rains.—These presented features of no special importance during the season under review.

Nature of the season in different divisions.

3. **Gujarat.**—The season opened well with fair ante-monsoon showers. The monsoon commenced earlier than usual with light showers from the beginning of June and was sufficiently heavy in

the second week of that month to permit the start of sowing operations all over the Division which were commenced on a general scale. There was a break of over seven days in the beginning of July, advantage of which was taken by cultivators for weeding and interculturing operations. Fairly good rain was received from the second week of July onwards and the germinated crops progressed well. Caterpillar attack, however, damaged the standing crops to some extent in parts of Ahmedabad district while stem-borer damage on sugarcane was reported from places in the Kaira district. The rainfall in August was somewhat below the normal in this Division except in the south where it proved fairly substantial. The rainfall in the northern tracts was light and scattered which proved detrimental to the growth of crops, especially paddy, which needed more uniform and heavier rainfall. Rains in September were adequate in the south of the Division and standing crops progressed satisfactorily. In the northern parts, however, rainfall was limited to a few light and intermittent showers during the first week of the month and, consequently, crops showed signs of want of adequate soil moisture. This lack of rain was most marked on the paddy crop in the rice-growing tracts. More rain was urgently needed at this time almost everywhere in the Division and particularly in the northern districts. In October, fairly substantial rainfall occurred in the south during the first week of the month but in the north it was light and insufficient. From the second week of this month there were no rains anywhere in the Division which proved detrimental to the growth of crops, especially in the northern areas where standing crops were withering in many parts due to deficiency of such late rains. The rice crop in particular suffered in all parts of the Gujarat Division and had to be maintained on irrigation where possible. In the south, however, the crop situation was comparatively better on account of the good rains received in the first week of the month. Subsequently no rain was received and the lack of moisture affected adversely the growth of crops especially in the northern tracts, although in the south, the situation was better and the crops in general, were thriving. To summarize, the season, on the whole, was disappointing in the northern portions of the Division but fairly good in the southern areas.

With regard to insect pests and plant diseases, hairy caterpillars appeared by the middle of June in Broach and Panchmahals and Kaira districts and did slight damage to *bajri* and *til*. The "wooly mite" infested crops at numerous centres but the attack gradually disappeared with the advent of the cold weather. The wheat crop was damaged considerably by stem-borer attack throughout the Division, especially in Broach and Panchmahals district where the lang crop also suffered from the attack of "lang caterpillars". Wilt attack on cotton was very slight during the season.

North Deccan.—There were fairly substantial ante-monsoon showers in this Division and the rainfall received in the first half of June was ample and wide-spread. As a result, sowing operations were started on a general scale, and conditions for germination and

growth were satisfactory. However, the excessively heavy rains received in the latter half of the month and in July caused water logging in many fields, especially in heavier types of soils, and caused damage to young seedlings. The progress of growth of young crops was checked almost everywhere during this prolonged wet period. A break in the rains, occurring opportunely in the early part of August was utilised profitably for weeding and interculturing operations and the condition of the crops improved. The latter half of August was characterised by intermittent breaks in the rains followed by a prolonged break in September, when further interculturing and weeding operations were carried out. Crops progressed well everywhere but further heavy rains in the last week of September, which were prolonged until the end of the first week of October, caused flooding of fields and again damaged the crops considerably. Considerable shedding of leaves and bolls occurred in the cotton crop and the harvesting of groundnut and *bajri* was interrupted. The season, on the whole, proved favourable for most of the crops up to the last week of September but the heavy rainfall mentioned above, which persisted until the first week of October, decreased the yield and lowered the quality of the produce in the case of the cotton, groundnut, *bajri* and *jowari* crops of the Division.

As regards insect, pests and crop diseases, severe damage was caused to the *bajri* crop in Chandor mahal of the Nasik district and to some extent, to cotton in Shirpur, by wingless grasshoppers. The attack of spotted boll-worm and pink boll-worm on the cotton crops in Khandesh was comparatively more severe than usual but the wilt disease of cotton was of normal intensity in north-east Khandesh. Grape vines in Nasik were severely attacked by downy mildew and anthracnose.

South Deccan.—Practically all over the tract, the ante-monsoon showers were opportune and sufficient and facilitated to a great extent the operation of the preparation of land for *kharif* sowings. The rainfall in June was short of requirements and more rain was necessary to advance sowing operations. Sowing of irrigated cotton was completed in this month in the canal areas. The rainfall in July was heavy in certain areas and, on the whole, was sufficient except in the eastern tracts where more rain was required by the end of the month for the normal growth of crops. Germinated crops were in a fairly good condition except sugarcane which was damaged considerably by grasshoppers on the Pravara and Godawari canals. In August rainfall was adequate in all areas except in the south eastern portion of the Division and the occasional breaks which occurred during the month proved favourable to the growth of crops. Weeding and interculturing operations were carried on and preparations for *rabi* cultivation were undertaken in some areas. Apart from a short break in the first half of September which was hardly sufficient for intercultivation operations, the latter part of September and the early weeks of October registered very heavy rain, with the result that standing crops were adversely affected and turned yellow in many areas due to excessive moisture. Harvesting of *kharif* crops was also

postponed while sowing of *rabi* crops and subsequent field operations were retarded. Clear weather conditions prevailed later in the month and the condition of the crops improved considerably. The prolonged *kharif* rains delayed the execution of tillage operations for *rabi* crops. However, the growth of crops remained satisfactory till the middle of November when for want of further rainfall, withering of *jowar* started in parts of the south east of the Division. In the same areas, the season was found to be unfavourable for wheat and gram which suffered for want of rain. In general, however, there was sufficient moisture for *rabi* cultivation and the *rabi* season had a good beginning. Subsequently, the crops in some areas suffered on account of the inadequacy of later rains. On the whole, the season in this Division both *kharif* and *rabi* may be described as satisfactory.

The irrigated cotton crop was affected by caterpillars and, in the Canal tracts, the sugarcane crop was severely attacked and damaged by grasshoppers. Wilt on cotton was noticed at some centres in the irrigated areas. The grasshopper damage to the sugarcane crop continued until the beginning of October when the heavy rain received at that time considerably reduced the trouble.

Karnatak.—The year began very well with good ante-monsoon showers almost everywhere except in the south of Bijapur district. The rainfall during the month of June was fairly substantial in the west of the Division and *kharif* sowings were commenced on a wide scale. In the eastern tract, the rainfall was light and scattered and was too deficient to permit of general sowing operations which were confined to favourable localities only. In July, rainfall was much below normal in the Division, especially in the eastern tract, where it was negligible. Standing crops in the west were being maintained on the soil moisture retained from the previous good rains, but, in the east, crops were wilting for want of sufficient moisture in the soil. There was plentiful and wide-spread rains in August in the eastern areas and the standing crops improved to a great extent. The outlook thus appeared fairly satisfactory in this tract. In the west, however, the rainfall was below requirements and further rain was needed for the proper growth of crops. In September, rainfall occurred in light showers in the first half of the month and proved beneficial to the standing crops. But the rains received in the latter half of the month were excessive and hampered *rabi* sowings and other field operations in parts of the Bijapur District. Matured *kharif* crops were also damaged and their harvesting was hindered. A break was, therefore, necessary in these areas. In the first week of October, a fair amount of rain was received in the east but the precipitation was more substantial in the west of the Division. This rain proved excessive in certain localities and damage to crops was caused, especially in river-side fields, on account of flooding. Dharwar American cotton suffered severely from excess of moisture in certain tracts of the Dharwar District where re-sowing was found necessary. After the first week of October, no further rain occurred in the Division which assisted in facilitating and expediting agricultural operations such as *kharif* harvesting and *rabi* sowing.

Light showers were received at the end of the first week of November over most of the Division which proved of much assistance to the standing crops. More rain was needed. No rain was received during December with the exception of a few local falls in Belgaum and Bijapur districts. The cotton crop in the eastern tracts of the Division suffered from deficient soil moisture and the drying effect of dry easterly winds. There was no rain in January and February in any part of the Division. The standing crops in the western areas were progressing well but those in the eastern tract showed poor development owing to lack of soil moisture combined with the desiccating effect of the easterly winds. However, in general, as a result of the substantial rain received during the season, the outturn of food grain crops increased and the season on the whole was generally satisfactory. Grasshopper damage was reported on the standing crops in parts of Dharwar and Bijapur Districts. Locusts also appeared in parts of Dharwar district and caused some damage. The cotton crop was affected in some areas by red-leaf blight, wilt, and jassid attack.

Konkan.—There were good ante-monsoon showers and the rainfall received in June proved rather in excess of cultivator's requirements. *Kharif* sowings, however, progressed satisfactorily. The rainfall in July was also in excess of normal and, in certain localities, too heavy precipitation caused damage to the rice crops. Elsewhere paddy seedlings and the sugarcane crop, as well as other garden crops, progressed satisfactorily, although more rain was needed in parts of Ratnagiri district by the end of the month. Good rainfall was received in August and the standing crops progressed well generally except in Kanara district where the rice crop was reported to have been affected by disease in some areas. Garden crops were in good condition except the betelnut crop which suffered from *koleroga* disease in some parts of the Kanara district. The rainfall in September was in excess of the normal in the south but was somewhat in defect in the north of the Division. Standing crops were generally in good condition in this month. At the end of the month, rainfall was rather excessive in parts of Ratnagiri district with the result that the early rice crop was lodged and its harvesting delayed on account of continuous rain. The late varieties of rice were, however, benefited by these rains. Fairly substantial and wide-spread rain was received all over the Division in the first week of October. This precipitation ultimately proved excessive and considerable damage was caused by floods in some areas. As a result standing crops were adversely affected and field operations were interrupted. Later in the month, the rains moderated and enabled field operations to be resumed. The harvesting of early sown crops was completed and that of late crops was in progress at the end of the month. The rainfall received in November was fairly substantial but also proved untimely and hindered agricultural operations. Standing crops including garden crops were generally in good condition. As a result of the seasonal conditions described above the general outturn of crops was somewhat reduced.

With reference to insect pests and crop diseases, *koleroga* on betelnut was reported from some parts of Kanara district but its spread was checked considerably by the incessant heavy rains in June and July, which, at the same time, made it difficult to carry out spraying operations as required. The heavy rain in September, however, caused a revival of the disease and hindered control measures thus causing a reduction in the yield. The late varieties of rice in the northern part of the Ratnagiri district were reported to have been slightly damaged by *leptispa* betel. In the Thana district, the attack of wilt on betelvines was very severe due to the prolonged heavy rains. In the Kolaba district, a disease known as *karpa* appeared sporadically and, although in individual cases the damage was heavy, the general effect of the attack was negligible. Cocoanut palms in Salsette were attacked by caterpillars.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Statement II, pages 36-43.)

4. **Number of Villages.**—The total number of villages in the Province remained stationary during the year under report, i.e., 22,852½ as reported last year. The only noticeable change occurred in the internal sub-classes of the number of villages, viz., "Surveyed" and "Unsurveyed". This took place in the case of four villages in Wai taluka of Satara district which were recorded as "Unsurveyed" hitherto but which, having been newly surveyed during the year, are now transferred to the heading "Surveyed".

Total Area and Reporting and Non-reporting Area.

5. **Total area.**—The total area showed a slight decline of 1,006 acres. The decline is noticed chiefly in the Thana district (1,278 acres) in the Konkan where proper adjustment and correction of mistakes in survey records have resulted in modification of area. Against the above decline, there was an increase of 254 acres in Dharwar district in Karnatak and 20 acres in Ahmedabad district in Gujarat due to similar corrections in survey records.

6. **Reporting area.**—The total area for which statistics were regularly collected and reported showed a net increase of 52,615 acres. The most noticeable increase occurred in Dharwar district (49,955 acres) alone which is due to new survey measurements and the correct classification from "Unsurveyed" to "Surveyed" being effected. Against this, there was a small decline of 1,278 acres in Thana district due to correction of mistakes in survey records.

7. **Non-reporting area.**—The variations under this head generally correspond with those under the heading "Reporting Area" which have been referred to above and hence call for no remarks.

Cropped Areas.

8. **Gross and Net Cropped Areas.**—Both these areas showed slight increases compared with the areas reported in the previous year. Thus, the gross cropped area increased by 57,000 acres, from 29,683 thousand acres in 1937-38 to 29,740 thousand acres in 1938-39 or by only 0·2 per cent. while the net cropped area showed an expansion of about 64,000 acres from 28,715 thousand acres in 1937-38 to 28,779 thousand acres during the year under report, or by 0·2 per cent. The most noticeable increase under the former heading, viz., gross cropped area, was in the Karnatak division (101,000 acres) which results from the favourable nature of the season in that part of the Bombay Province.

9. **Twice cropped area.**—This figure showed a reduction of 7,000 acres or 0·7 per cent. as compared with the previous year, having fallen from 968 thousand acres to 961 thousand acres. The decrease is shared mainly among the following districts :—

Kaira (– 18,000 acres), Broach and Panchmahals (– 12,000 acres), Ahmedabad (– 11,000 acres) and East Khandesh (– 7,000 acres). Against these, there was an increase in Bijapur (+ 20,000 acres), Ahmednagar (+ 13,000 acres), Poona (+ 4,000 acres) and Satara (+ 4,000 acres).

10. **Assessed and Unassessed Area.**—The assessed area remained almost stationary as compared with the previous year, the increase being only 2,000 acres, i.e., it rose from 33,479 thousand acres in 1937-38 to 33,481 thousand acres during the year under report while the unassessed area showed a corresponding decline of 2,000 acres, i.e., from 295 thousand acres in 1937-38 to 293 thousand acres during the year under report or by 0·7 per cent.

11. **Temporary cultivation in Forest lands and culturable waste.**—The latter heading has now been changed to "Other uncultivated land excluding current fallows" during the year under orders of the Government of India. About 1,45,000 acres of forest lands were given out for temporary cultivation mainly, in the districts of West Khandesh (42,000 acres), Ahmednagar (35,000 acres), Thana (27,000 acres), Sholapur (23,000 acres), Nasik (9,000 acres), Surat (4,000 acres), East Khandesh (3,000 acres) and Belgaum and Poona (1,000 acres each), while about 86,000 acres of "Other uncultivated land excluding current fallows" mainly, in the districts of West Khandesh (51,000 acres), Nasik (14,000 acres), Ahmednagar (5,000 acres), Thana (4,000 acres), Poona, Belgaum and Ahmedabad (2,000 acres each) and Surat, East Khandesh, Sholapur, Satara, Kolaba and Kanara (1,000 acres each) were similarly dealt with. The area figures under the new sub-heading "Culturable" definitely known is 1,48,280 acres only. Out of this total, 44 acres in Ahmedabad district only have been given out for temporary cultivation during the year.

CHAPTER III—CROPPED AREA.

(Statement III, pages 44-65.)

12. **Variations in Cropped Area.**—The main features of the season and its effect on the area and yield of crops have been described elsewhere in the Report. Appendix B (page 28) shows the effect of the season under review and the areas sown as compared with the average (of ten years from 1921-22 to 1930-31) and the preceding year's area under the principal crops.

13. **Food crops.**—The area under food crops, i.e., cereals and pulses, sugarcane and fruits and vegetables shows a slight rise of 1,31,000 acres, or 0·6 per cent. over the previous year but a great expansion is noticed of 1,067 thousand acres, or 5·4 per cent. when compared with the average. Among the *kharif* crops, the area under *bajri* increased by 2,23,000 acres, or 5·5 per cent. when compared with the last year and 2,07,000 acres, or 5·5 per cent. when compared with the average. The large increase of 2,23,000 acres in the area under *bajri* occurred mainly in the Karnatak on account of suitable and sufficient rains for sowing. There was a slight decrease in the area under rice (22,000 acres), or 1·1 per cent. when compared with the previous year but showed a rise of (85,000 acres), or 4·4 per cent. when compared with the average. The area under *jowar*, which is grown both as a *kharif* and *rabi* crop, showed a decrease of 3,45,000 acres, or 4·3 per cent. when compared with the previous year and 1,99,000 acres, or 2·5 per cent. as compared with the average. The area under *jowar* showed a reduction of 6,43,000 acres, or 11·0 per cent. mainly, in the *rabi* area as compared with the previous year. Under *rabi* crops, wheat showed a rise of 30,000 acres, or 1·6 per cent. when compared with the last year, although it showed an appreciable increase of 4,38,000 acres, or 30·8 per cent. when compared with the average. The area under gram showed a reduction of 79,000 acres, or 11·7 per cent. as compared with the previous year but a rise of 82,000 acres, or 16·0 per cent. when compared with the average.

14. **Non-food Crops.**—The area under non-food crops, which include cotton, tobacco, and oilseeds, showed a contraction of 75,000 acres, or 0·8 per cent. as compared with last year but an increase of 3,93,000 acres, or 4·6 per cent. when compared with the average. The most marked decrease was in the area under tobacco which was reduced by 15,000 acres, or 8·8 per cent. as compared with the previous year but showed an expansion of 36,000 acres, or 30·3 per cent. as compared with the average. The average under oilseeds increased by 1,03,000 acres, or 4·3 per cent. as compared with last year although the increase amounted to 12,36,000 acres, or 98·4 per cent. when compared with the average. The increase under oilseeds is mainly attributable to the extended cultivation of groundnut and sesamum crops. The area

under cotton showed a reduction of 1,63,000 acres, or 4·2 per cent. when compared with the last year and 5,84,000 acres, or 13·6 per cent. as compared with the average. The net result of these variations in the food and non-food crops, as noted above, was that the total cropped area showed a slight increase of 56,000 acres, or 0·2 per cent. when compared with the previous year but an appreciable expansion of 14,60,000 acres when compared with the average.

15. **Kharif and Rabi Areas.**—The following table compares the area under *kharif* and *rabi* crops of the year under report with the similar figures for the preceding two years.

(Area in thousand of acres).

Details.	1936-37.			1937-38.			1938-39.		
	Cereals.	Pulses.	Total Cereals and Pulses.	Cereals.	Pulses.	Total Cereals and Pulses.	Cereals.	Pulses.	Total Cereals and Pulses.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif ...	8,064	1,683	9,747	9,662	1,873	11,535	10,281	1,993	12,274
Rabi ...	9,376	822	10,198	7,761	885	8,646	7,133	872	8,005
Total ...	17,440	2,505	19,945	17,423	2,758	20,181	17,414	2,865	20,279

It will be seen from the above table that the *kharif* area during the year under review showed an increase of 7,39,000 acres over the area of the previous year (1937-38), and 25,27,000 acres when compared with the year previous to the last (1936-37). The *rabi* area on the other hand declined by 6,41,000 acres below the last year 1937-38 and is reduced by as much as 21,93,000 acres when compared with the year before last year (1936-37). The net result of these variations was that the total area under cereals and pulses extended by 98,000 acres, or 0·5 per cent. and 3,34,000 acres, or 1·7 per cent. when compared with last year 1937-38 and the year previous to last (1936-37), respectively.

16. **Variations under Principal Crops.**—The detailed remarks below explain the variations under the principal crops.

Jowari and Bajri.—The sub-joined table compares the extent of variations in area under these staple crops in different divisions of the Bombay Province during the ten year's average and the year previous to the year under report.

(Area in thousands of acres.)

Division.	Jowar.									Bajri.		
	*Average.			1937-38.			1938-39.			Average.	1937-38.	1938-39.

* Average of the years 1921-22 to 1930-31.

It will be seen from the above table that the area under *jowar* (chiefly, *rabi*) fell short of the previous year by 6,43,000 acres, or 11·0 per cent. and 5,80,000 acres, or 10·1 per cent. respectively when compared with the average. As compared with last year, the decline was chiefly marked in Karnatak (−6,29,000 acres) and Deccan (−27,000 acres), due to less sowings of *kharif* crops. The area under *bajri* on the other hand, increased by 2,23,000 acres, or 5·5 per cent. and showed an expansion of 2,07,000 acres, or 5·1 per cent. respectively, when compared with the last year (1937-38) and the average. The increase over the previous year was marked in Gujarat (+52,000 acres) and chiefly in Karnatak (+2,79,000 acres) owing to suitable and sufficient moisture in the soil at the time of sowing. Against this, there was a reduction of 1,08,000 acres in the Deccan chiefly, in Ahmednagar district due to excessive rain during the sowing season.

Rice.—The area under this crop was reduced by 22,000 acres or 1·1 per cent. below the previous year, from 20,37,000 acres in 1937-38 to 20,15,000 acres during the year under report. The decrease was chiefly noticed in North Gujarat (−43,000 acres) and may be attributed to deficiency of rains for sowing. Against this, there were increases in South Gujarat (+13,000 acres), Karnatak (+5,000 acres), Konkan (+2,000 acres) and Deccan (+1,000 acres).

Wheat.—The area under wheat increased by 30,000 acres, or 1·6 per cent. when compared with the last year although it showed an appreciable increase of 4,38,000 acres, or 30·8 per cent. as compared with the average. This increase was chiefly marked in the Deccan (+1,01,000 acres), and was general in all the districts of the division owing to sufficient and timely rains for sowing and to the replacement by *rabi* crops of *kharif* crops in areas where the latter could not be sown owing to unfavourable conditions at the beginning of the *kharif* season. Against this, there was a contraction in area in Gujarat (−57,000 acres) owing to want of adequate rains for sowing and in Karnatak (−15,000 acres), where the late rains were excessive, and in certain localities, sowings were not taken on the usual scale.

Oilseeds.—The area under oilseeds rose by 103,000 acres, or 4·3 per cent. over the previous year but showed a considerable increase of 1,236,000 acres, or 98·4 per cent. as compared with the average. The groundnut crop (+92,000 acres) and sesamum (+44,000 acres) were mainly responsible for the above increase under this head as compared with the previous year, the variations under other oilseeds being generally small. The following table and appended remarks explain the variations in area, under the principal oilseeds as compared with the previous year.

Increase or decrease in thousands of acres as compared with the last year.

	Oilseeds.	Increase or decrease over last year.
1.	Linseed	+13
2.	Sesamum	+44
3.	Rape and Mustard	−2
4.	Groundnut	+92
5.	Castor-seed	+4

Groundnut.—The area under groundnut rose by 92,000 acres, or 6·8 per cent., i.e., from 1,344,000 acres in 1937-38 to 1,436,000 acres during the year under report. The increase was shared by the Deccan (+82,000 acres) and Karnatak (+23,000 acres). Against this, there was a decline of (−14,000 acres) in Gujarat due more area being sown under other *kharif* crops.

Sesamum.—The area under this crop rose by 44,000 acres from 166,000 acres in 1937-38 to 210,000 acres during the year under report. The increase was divided between Gujarat (+17,000 acres), Karnatak (+22,000 acres) and Deccan (+5,000 acres).

Castor-seed.—The area under castor seed showed a slight expansion of 4,000 acres as conpared with the previous year. The increase was noticed in Deccan (+4,000 acres), principally in the West Khandesh District (+3,000 acres) owing to the preference for this crop over groundnut.

Linseed.—The area under this oilseed, which is almost exclusively a *rabi* crop and is grown principally in the Deccan and Karnatak, exhibited an increase of 13,000 acres when compared with the previous year. The increase in area was chiefly marked in the Deccan (+21,000 acres) due to timely and sufficient rain for sowing while in Karnatak the area showed a reduction of 7,000 acres.

Rape and Mustard.—These oilseeds are of minor importance in this Province and their cultivation is mainly restricted to North Gujarat. The area under these showed a slight contraction of 2,000 acres only as compared with the previous year, from 20,000 acres in 1937-38 to 18,000 acres during the year under report.

This reduction was chiefly noticed in the case of North Gujarat in Ahmedabad district where it was due to deficient late rains in the latter part of the season.

Cotton.—The area under cotton showed a reduction of 163,000 acres, or by 4·2 per cent. from 3,862,000 acres in 1937-38 to 3,699,000 acres during the year under report. The decrease was general and was marked in the Deccan (−81,000 acres), Gujarat (—60,000 acres) and Karnatak (—22,000 acres). The decline in the Deccan, Karnatak and Gujarat in general may be attributed partly to preference being given to food grain crops due to fall in prices of *kapas* and partly to the unsuitability of rains in the north of the Gujarat Division.

Sugarcane.—The area under this crop expanded by 5,000 acres only, or 7·0 per cent. from 71,000 acres in 1937-38 to 76,000 acres during the year under report. This expansion mostly occurred in Ahmednagar district (+5,000 acres) of the Deccan Division owing to the increase in area occupied by the sugar factories. The variations in other districts, being very small, call for no remarks.

Tabacco.—The acreage under tobacco showed a decrease of 15,000 acres, or 8·8 per cent. as compared with the previous year. The decline was chiefly marked in the Kaira district of Gujarat (—17,000 acres). This decrease was due to deficient soil moisture as the crop being a late one, requires ample moisture for sowing. Against this, there was an increase of 2,000 acres, in the Belgaum district of Karnatak owing to good sowing conditions.

Fruit and Vegetables.—The area under these showed a small increase of 4,000 acres, as compared with the previous year, on account of favourable monsoon conditions. The increase was chiefly marked in the Deccan (+3,000 acres) and Gujarat (+1,000 acres). Appendix C (pages 30-31) shows as usual, the distribution (in each district of the Province) of the principal food and non-food crops in terms of percentage of the gross cropped area.

CHAPTER IV—IRRIGATED AREA.

(Statements IV, pages 66-83 and IV-A, pages 84-87.)

18. **Variations in the irrigated area and crops.**—Appendix D, (page 32) exhibits variations under the several heads of irrigation and crops irrigated as compared with similar details for the previous year.

19. **Area irrigated.**—This showed an expansion of 52,000 acres, or 4·7 per cent. as compared with the previous year, having increased from 1,095,000 acres in 1937-38 to 1,147,000 acres during the year under review. The increase was mainly noticeable in the Deccan (+69,000 acres) where owing to the unfavourable character of the

rains more need was felt to resort to irrigation sources. Karnatak (+9,000 acres) also contributed to the increase. Against this, there was some decrease in Gujarat (-17,000 acres) and Konkan (-9,000 acres).

20. **Area irrigated from different sources of irrigation—Government Canals.**—The area irrigated under Government Canals showed a reduction of 19,000 acres, or 7·2 per cent. when compared with the previous year. The decrease (-19,000 acres) was mainly marked in North Gujarat as a result of want of sufficient water in Canals for cultivation due to insufficient rains.

Private Canals.—Irrigation from private Canals showed an advance of 14,000 acres, or 19·2 per cent. having increased from 73,000 acres in the previous year to 87,000 acres during the year under review. Almost the whole of the increase was noticed in the Deccan but the variation in each district except Ahmednagar, being small, call for no remarks. In the Ahmednagar district, the variation (+9,000 acres) was due to a greater supply of water being made available by opening new pats as a result of favourable rainfall. In the Karnatak and Konkan, irrigation by private canals almost remained stationary while in Gujarat, irrigation from this source was practically absent.

Wells.—Well irrigation extended by 84,000 acres, or 13·9 per cent. when compared with the previous year. Except in Konkan, the increase was shared by all other Division in the Province particularly in the Deccan, where owing to deficient and unseasonable rains, there was greater need to resort to well irrigation to maintain the more valuable crops.

Tanks.—The area irrigated by tanks decreased by 8,000 acres, or 7·1 per cent. from 113,000 acres in 1937-38 to 105,000 acres during the year under report. This decline is chiefly noticed in Gujarat. (- 14,000 acres) and Deccan (-4,000 acres). Against this decline, there was an increase of (+ 11,000 acres) in Karnatak. The decrease in Gujarat was mainly due to less water in the tanks on account of inadequate rains in North Gujarat.

Other Sources.—The area under irrigation from "Other sources" showed a decline of 19,000 acres, or 47·5 per cent. from 40,000 acres in the preceding year to 21,000 acres during the year under review. The decrease was shared by all the divisions in the Province, particularly, in the Dharwar district (- 11,000 acres) in the Karnatak and Ratnagiri district (- 5,000 acres) in Konkan.

21. **The ratio of the irrigated area to the net cropped area.**—This was 4·0 per cent. during the year under review. Out of this, Government Canals represent 0·8 per cent. private canals 0·3 per cent. wells 2·4 per cent., tanks 0·4 per cent. and other sources of irrigation 0·1 per cent.

22. CROPS IRRIGATED.

Jowar.—The area under irrigated *jowar* rose by 22,000 acres, or 9·3 per cent., over the previous year. The increase occurred mostly in the Ahmednagar district (+ 28,000 acres) in the Deccan and was mainly due to the failure of *bajri* crop. Against this, there was a decrease of 6,000 acres in the Karnatak due to adequate rainfall for non-irrigated crop sowings.

Bajri.—Irrigated *bajri* also showed an increase of 18,000 acres, or 33·3 per cent. as compared with the previous year. The increase occurred mostly in the Deccan (+ 19,000 acres) which was partly due to the failure of the *jirayat bajri* crop in the Ahmednagar district and partly due to adequate water supply for irrigation purposes. Against this, there was a small decrease of 1,000 acres in North Gujarat.

Rice.—The area under irrigated rice declined by 35,000 acres, or 16·9 per cent. when compared with the previous year. The decrease was noticed in Gujarat (−29,000 acres), South Konkan (−4,000 acres) and Karnatak (−2,000 acres); and may be attributed to insufficient water supply in the irrigation sources.

Wheat.—Irrigated wheat showed only a slight increase by 1,000 acres, or 0·5 per cent. when compared with the previous year and hence calls for no remarks.

Cotton.—The area under irrigated cotton showed a reduction of 7,000 acres, or 16·7 per cent. as compared with the pervious year. Almost the whole of the decrease was noticed in the Deccan.

23. **Sugarcane.**—As already noted when dealing with the crop in Chapter III, the increase of 6,000 acres, or 8·7 per cent. in the area under sugarcane during the year under review was in the South Deccan and was due to extended cultivation of sugarcane factories.

CHAPTER V.—OUTTURN OF CROPS.

(Statements V, pages 88-89 and V-A, pages 90-104.)

24. **Yield of Principal Crops.**—Statement V (pages 88-89) shows the estimated yield of the principal *kharif* and *rabi* crops, taking 100 as representing the normal. It is prepared from the district estimates which are returned in annas on the basis of twelve annas denoting the normal crop. The figures are, therefore, only approximate. The character of the season has already been described elsewhere in the Report.

25. Outturn of crops in parts of the normal.

A.—Kharif Crops.—

Jowar.—The outturn of *kharif jowar* was only 58 per cent. of the normal in the Poona district in the Deccan and Dharwar district in the Karnatak. It ranged between 60 and 67 per cent. of the normal in the Ahmedabad, Kaira and Broach and Panch Mahals districts of North Gujarat, Satara district in the Deccan and the Belgaum district in the Karnatak. It rose to 75 per cent. of the normal in the West Khandesh and East Khandesh districts in the Deccan and Kanara (Karwar) districts in the Konkan and to 83 per cent. of the normal in the Surat district in Gujarat. It, however, approached a full normal in the Nasik district in the Deccan.

Bajri.—The yield of the crop was 58 per cent. of the normal in the three districts of the Karnatak and Poona and Sholapur districts in the Deccan. It varied from 60 to 67 per cent. of the normal in the Ahmednagar and Satara districts in the Deccan and the Kaira and Broach and Panch Mahals districts in Gujarat. The outturn of the crop ranged between 75 and 83 per cent. of the normal in the West Khandesh, East Khandesh and Nasik districts in the Deccan and the Ahmedabad and Surat districts in Gujarat.

Rice.—With the exception of West Khandesh, Nasik, Ahmednagar, Thana and Ratnagiri districts where the yield of the crop was 83 per cent. of the normal and of the Kolaba district, where it nearly approached the normal, the outturn of the crop in other parts of the Province varied from 50 to 78 per cent. of the normal. In Gujarat, the crop was practically a failure being only 23 per cent. of the normal in the Kaira district and 42 per cent. of the normal in the Ahmedabad district. Similarly, the outturn of the crop was only 46 per cent. of the normal in the Dharwar district of the Karnatak due to less water supply owing to deficiency of rains during the season.

Cotton.—The outturn of the late varieties of cotton was 43 and 47 per cent. of the normal in the Ahmedabad and Kaira districts, respectively of Gujarat and 58 per cent. of the normal in the Bijapur and Dharwar and 67 per cent. of the normal in the Belgaum districts of the Karnatak. In the Deccan, where the early varieties of cotton are generally cultivated, the yield of the crop varied from 42 and 58 per cent. of the normal in all the districts except Nasik and Ahmednagar where it came to 75 per cent. of the normal. It rose to 83 per cent. of the normal in the Satara district due to seasonal rainfall. As regards the actual outturn of the crop, as estimated by the number of bales, it may be stated that so far as the area factor is concerned, it showed a reduction of 351,000 acres, or 5·7 per cent., when compared with the previous year. Thus, the total area in the Province, including the Indian States, stood at

5,823,000 acres during the year under report against 6,174,000 acres in the preceding year (1937-38). The outturn also declined by 163,000 bales, or 13·4 per cent. This decrease may be partly attributed to the unfavourable seasonal condition in the North and partly to heavy late rains in places in the Karnatak. Of this outturn of 1,050,000 bales, 423,000 bales, or 40·3 per cent., represented the yield of the long stapled cotton, viz., Broach, Dharwar and Kumta varieties, while the remaining 627,000 bales, or 59·7 per cent., belonged to the short stapled varieties of North Gujarat, Western India States Agency and Khandesh. As compared with the previous year, the outturn of the long staple rose by 14·9 per cent. while that of the short staple cotton fell by 25·8 per cent.

Sesamum.—This oilseed yielded between 50 and 58 per cent. of the normal in the Sholapur district in the Deccan and the three districts of the Karnatak, while its outturn ranged between 67 and 75 per cent. of the normal in all the districts of the Deccan except Sholapur, Thana and Kanara districts in the Konkan and Broach and Panch Mahals district in Gujarat. The yield of the crop was poor, being only 31 per cent. of the normal in the Kaira district and 42 per cent. of the normal in the Ahmedabad district due to deficiency of rains in the season. It rose to 82 per cent. of the normal in the Surat district while it approached a full normal in the Kolaba district.

26. **B—Rabi Crops.—**

Jowar (Rabi).—The *rabi jowar* was only 42 per cent. of the normal in the Ahmedabad district in North Gujarat due to dificient soil-moisture. In other parts of the Province, the outturn of the crop varied from 58 to 75 per cent. of the normal except the West Khandesh district in the Deccan where it came up to 83 per cent. of the normal.

Wheat.—The yield of the crop was only 39 per cent. of the normal in the Kaira district in Gujarat due to insufficient rains and between 50 and 58 per cent. of the normal in the Ahmedabad and Broach and Panch Mahals districts in Gujarat and the Poona district in the Deccan and Bijapur and Dharwar districts in the Karnatak. In the remaining districts of the Province, the outturn of the crop varied from 59 to 75 per cent. of the normal except in the West Khandesh and Satara districts in the Deccan and Surat district in Gujarat where it came up to 83 per cent. of the normal.

Gram.—The outturn of gram was only 42 per cent. of the normal in the Ahmedabad district in Gujarat and the Sholapur district in the Deccan. It ranged between 50 and 58 per cent. of the normal in the Broach and Panch Mahals district in Gujarat and Bijapur and Dharwar districts in the Karnatak, between 64 and 78 per cent. of the normal in the remaining districts of the Province. It rose to 83 per cent. of the normal in the West Khandesh and

Nasik districts in the Deccan, while in the Kolaba district, a full normal yield could be secured. In the Kaira district, the crop was very poor and came to only 27 per cent. of the normal.

Tobacco.—The outturn of the crop ranged between 50 and 58 per cent. of the normal in the Dharwar and Bijapur districts in the Karnatak, and the Sholapur district in the Deccan, and Ratnagiri district in the Konkan and between 63 and 67 per cent. of the normal in the Ahmedabad and Broach and Panchmahals districts in Gujarat, Poona district in the Deccan and Belgaum district in the Karnatak. It came to about 75 per cent. of the normal in the East Khandesh, Nasik and Satara districts in the Deccan. In the districts of Surat, West Khandesh and Ahmednagar, the yield of the crop came up to 83 per cent. of the normal. The outturn of the crop was less than half the normal in the Kaira district as the crop suffered from deficient soil-moisture.

Linseed.—The cultivation of this oilseed is almost exclusively confined to the Deccan and Karnatak. In the former division, the outturn of the crop varied from 58 to 75 per cent. of the normal in all the districts except Sholapur where it came to only 42 per cent. of the normal. In the latter division, (viz., Karnatak) the crop yielded between 50 and 58 per cent. of the normal in all the three districts of the division.

Rape and Mustard.—These oilseeds gave an outturn of only 42 per cent. of the normal in the Ahmedabad district in Gujarat. Their yields came to 33 per cent. of the normal in the Kaira and Broach and Panchmahals districts in Gujarat owing to deficiency of rains at sowing time, while in the Surat district, it came to about 68 per cent. of the normal.

Sugarcane.—The outturn of sugarcane ranged between 42 and 67 per cent. of the normal in the Ahmedabad and Kaira districts in Gujarat, Dharwar and Bijapur districts in the Karnatak, while it varied from 75 to 83 per cent. of the normal in the remaining districts of the Province except in the districts of West Khandesh, Sholapur, Satara and Thana where the crop gave an yield of 92 per cent. of the normal, while it approached a full normal in the Kolaba and Ratnagiri districts.

OUTTURNS IN TONS OF FOOD-GRAINS.

27. **Crops.**—Statement V-A (pages 90-104) compares the average under food-grain crops (cereals and pulses) in each district of the Province and their approximate outturns in tons during the year

under report with similar statistics for the two preceding years. The following table summarizes the position :—

Division.	Area in thousands of acres.			Outturn in thousands of tons.		
	1936-37.	1937-38.	1938-39.	1936-37.	1937-38.	1938-39.
	Acres.	Acres.	Acres.	Tons.	Tons.	Tons.
Gujarat	2,426	2,453	2,490	485	692	608
North Deccan	3,807	3,714	3,779	714	748	745
South Deccan	7,412	7,532	7,423	1,091	1,000	1,055
Karnatak	4,995	4,867	4,973	780	631	859
Konkan	1,605	1,615	1,614	605	678	632
Total—Bombay Province ...	19,945	20,181	20,279	3,675	3,749	3,899

It will be seen from the above table that both the area and outturn of the food-grain crops rose by 0·5 per cent. and 3·2 per cent. respectively, as compared with the previous year. This increase was chiefly marked in the Deccan and Karnatak. The yield of food crops has been satisfactory in the South Deccan and Karnatak. In the former division, however, notwithstanding a decline in area, the resulting outturn showed an improvement over that obtained last year. The crop in yield in Gujarat was due to the season being unfavourable in the north of the division while the reduction in yield in the North Deccan and Konkan was due to similar adverse seasonal conditions in these areas on account of heavy late rains which caused considerable damage to the *kharif* crops.

BP Bk Q 27—2a

CHAPTER VI—PRICES, TRADE AND STOCK.

(Statement VI, Pages 105-107.)

28. **Prices of Principal Articles.**—Statement VI—Prices—shows the retail prices of the principal staple crops and of fodder, ruling at harvest time at each district head-quarter station in the Bombay Province. The following remarks show major variations in the prices of the principal articles as compared with those of the previous year.

Jowar.—The price of *jowar* ruled easier from one-half of a seer to about two and one-fifth seers per rupee at all the stations in Gujarat, Jalgaon (East Khandesh), Poona and Satara in the Deccan, Belgaum and Dharwar in the Karnatak, and Karwar (Kanara) in the Konkan, the price being cheaper by about four and one-fifth seers per rupee at Bijapur in the Karnatak. At the remaining stations in the Province, the price of *jowar* ruled dearer from two-fifth of a seer to nearly one and one-half of a seer per rupee with the exception of Dhulia (West Khandesh) in the Deccan where the price was almost stationary.

Bajri.—With the exception of Nasik in the Deccan where it was dearer by about one-eighth of a seer, the price of *bajri* ruled cheaper at all the stations in the Province from one-half of a seer to four seers per rupee, the price of the article being still cheaper, i.e., by about six seers per rupee at the three stations of Karnatak.

Wheat.—The price of wheat ruled easier from two-fifth of a seer to two and three-fourth seers per rupee everywhere in the Province, except at Sholapur in the Deccan, Belgaum in the Karnatak and at Alibag (Kolaba) in the Konkan where the price of this article was dearer from one-eighth of a seer to about one-half of a seer per rupee.

Rice.—The price of rice ruled easier from one-eighth of a seer to two and two-fifth seers per rupee at Kaira and Broach in Gujarat all the stations except Ahmednagar and Sholapur in the Deccan, Belgaum and Dharwar in the Karnatak and the Karwar (Kanara) in the Konkan. It was dearer fram one-eighth of a seer to one and one-half of a seer per rupee at Ahmedabad and Godhra (Broach and Panch Mahals) in Gujarat, Sholapur in the Deccan, Bijapur in the Karnatak and at all the stations except Karwar (Kanara) in the Konkan. At Surat in Gujarat and at Ahmednagar in the Deccan the price of the article was almost stationary.

Gram.—The price of gram was cheaper from one-eighth of a seer to one and one-eighth of a seer per rupee at Bijapur and Dharwar in the Karnatak, and at Thana and Ratnagiri in the Konkan, it being almost stationary at Alibag (Kolaba) in the Konkan. At the remaining stations in the Province the price of the article ruled dearer by one-fourth of a seer to four seers per rupee.

Tur Dal.—The price of *tur dal* ruled dearer by about one-sixth of a seer and by about two-fifth of a seer at Alibag (Kolaba) and at Karwar (Kanara), respectively, in the Konkan, and it was stationary at Nasik in the Deccan. At the remaining stations in the Province the price of the article ruled easier from one-eighth of a seer to two seers per rupee.

Gul.—The price of *gul* ruled dearer by one and one-eighth of a seer to three and four-fifth seers per rupee almost everywhere in the Province, except at Nasik in the Deccan and at Belgaum in the Karnatak where it ruled still dearer by four and a half seers and by four and three-fifth seers per rupee, respectively. The price at Satara in the Deccan was more than double that in the last year.

Tobacco.—The price of tobacco ruled easier from one-eighth of a seer to one-half seer per rupee at Ahmedabad and Kaira in Gujarat, Dhulia (West Khandesh) and Sholapur in the Deccan, and at Alibag (Kolaba) in the Konkan. It ruled dearer by one-eighth of a seer to one and three-fourth seers per rupee at Jalgaon (East Khandesh), Poona and Satara in the Deccan, and at Thana and Ratnagiri in the Konkan. At the remaining stations in the Province the price of the article was almost stationary.

Cotton.—The variations in the area and outturn of this crop, as compared with the figures of the last year, have already been noted in the respective chapters and need not be repeated here. The following table compares the prices of the article during the year under report, with those of the previous year (1937-38) and the average of the preceding five years :—

Variety.	Prices per bale of 400 lbs.			Variation.	
	Average of the five years ending 1937.	Average of the seven months ending 31st July.		Compared with the average in column 2.	Compared with the prices in 1938.
		1938.	1939.		
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach	113	83	83	-26·5	.....
Khandesh	98	70	72	-26·5	+2·9
Kumta	Not available.	100	93	Not available.	-7·0

*As it was not found possible to quote above prices of "Saw ginned Dharwar" cotton, this variety being more or less non-existent from the trade point of view, "Kumta" cotton has been substituted since 1936-37. The prices of this variety for the previous years, however, are not available.

Converting the above figures into prices per *khandi* (of 784 lbs.) they are as follows :—

Variety.	Prices per *khandi* of 784 lbs.			Variation.	
	Average of the five years ending 1937.	Average of the seven months ending 31st July.		Compared with the average in column 2	Compared with the prices in 1938.
		1938.	1939.		
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach ...	222	163	163	—26·5	.....
Khandesh ...	192	137	141	—26·5	+2·9
Kumta* ...	Not available.	196	183	Not available.	—7·1

*As it was not found possible to quote the prices of " Saw ginned Dharwar " cotton the variety being more or less non-existent from the trade point of view " Kumta " cotton has been substituted since 1936-37. The prices of this variety for the previous years, however, are not available.

It will be seen from the above table that the prices for Broach and Khandesh were almost stationary, while the price for Kumta variety ruled slightly easier than in the previous year. It will be noticed that the prices of the first two varieties namely, Broach and Khandesh, have been, during the year under report, only about three-fourth of what they were on an average during the quinquennium ending 1937. However, cotton prices were, as usual, very sensitive to fluctuations in foreign markets. The actual fluctuations will be seen from the following statement which shows that the prices in rupees per *khandi* of Broach cotton at Bombay during the year under report :—

Year and month.	Price per *khandi* of 784 lbs.	Year and month.	Price per *khandi* of 784 lbs.
1938.	Rs.	1939.	Rs.
August ...	148	January ...	.....
September ...	144	February ...	153
October ...	.....	March	157
November ...	.....	April	157
December ...	.....	May	171
		June	172
		July	161

Dry Grass.—Except at Broach in Gujarat where the price of dry grass was dearer by about twelve annas per Indian maund, it rose from about one anna to three and half annas at Nasik and Poona in the Deccan, Dharwar in the Karnatak and at Ratnagiri in the Konkan. It ruled cheaper from one anna to about seven annas per Indian maund at Godhra (Broach aud Panch Mahals) and Surat in Gujarat, Satara in the Deccan, and at Alibag (Kolaba) in the Konkan, the price being cheaper by ten and half annas at Jalgaon (East Khandesh) in the Deccan. At the remaining stations in the Province the price of the article was stationary.

Jowari Kadbi,—The price of *jowari kadbi* rose by about one annas per Indian maund at Dharwar in the Karnatak and by about three annas at Poona in the Deccan, it being still dearer, i.e., by about fourteen annas at Satara in the Deccan. The price of the article ruled easier from about one and half anna to about eight and half annas at Ahmedabad and Surat in Gujarat, Jalgaon (East Khandesh), Ahmednagar and Sholapur in the Deccan and at Bijapur in the Karnatak, it being still cheaper, i.e., by about fourteen annas at Nasik in the Deccan and by about one rupee and three annas at Broach in Gujarat. In the Konkan where rice straw is used in place of *jowari kadbi*, the price of rice straw ruled easier by five and half annas per Indian maund at Alibag (Kolaba), while it rose by two annas at Karwar (Kanara). At the remaining two stations, namely, Thana and Ratnagiri, the price of the article was almost stationary.

CHAPTER VII—AGRICULTURAL STOCK.

29. Information under this head is collected once in five years. The result of the last enumeration has been published in the Season and Crop Report of the Province for the year 1934-35.

CHAPTERS VIII AND IX.

Condition of the Agricultural Population.

30. As already stated in Chapter I of the Report, the agricultural season of 1938-39 was on the whole fairly satisfactory over a large part of the Province. The only exception was in North Gujarat where the season was disappointing.

31. So far as the available supply of food-grain crops to the general population is concerned, the year under review may be regarded as somewhat better than its predecessor. The following tabular statement compares the actual acreage sown and the estimated tonnage of food-grain crops produced in the different divisions of the Province during the years 1937-38 and 1938-39.

Division.	Area in thousand of acres.		Estimated outturn in thousands of tons.	
	1937-38.	1938-39.	1937-38.	1938-39.
	Acres	Acres	Tons	Tons
Gujarat	2,453	2,490	692	608
North Deccan	3,714	3,779	748	745
South Deccan	7,532	7,423	1,000	1,055
Karnatak	4,867	4,973	631	859
Konkan	1,615	1,614	678	632
Total Bombay Province ...	20,181	20,279	3,749	3,899

The table indicates that the yield of food crops was satisfactory in South Deccan and the Karnatak. In the former division, however, notwithstanding a decline in area, the resulting outturn showed an improvement over that obtained last year. The drop in yield in Gujarat was due to the season being unfavourable in the North of the division while the reduction in the yield in North Deccan and Konkan was due to similar adverse conditions resulting from late heavy rains which caused considerable damage to *kharif* crops.

32. As regards the prices of agricultural produce, there was scarcely any improvement during the year under report except in the case of rice and *jowar* as can be seem from the sub-joined table.

Prices prevailing at harvest time for agricultural produce in seers of 80 tolas per rupee except for cotton which are recorded in rupees per khandi of 784 lbs.

Articles	Centre	1934-35	1935-36	1936-37	1937-38	1938-39
		Seers	Seers	Seers	Seers	Seers
A—Food crops.						
Jowar	Sholapur ...	15	21	16	17	16
Bajri	Nasik ...	11	13	11	11	11
Rice	Thana ...	9	8	7	9	8
B—Export crops.						
Wheat... ...	Ahmedabad ...	11	8	7	10	11
Groundnut ...	Karad ...	18	13	10	14	15
		Rs.	Rs.	Rs.	Rs.	Rs.
Cotton... ...	Bombay (Broach) .	261	207	234	163	160

33. The condition of cattle was generally satisfactory. Although rinderpest and foot and mouth diseases appeared as usual in some districts, they did not assume such a serious aspect as to interfere with the normal progress of agricultural operations.

34. Wages of agricultural labour remained generally the same as in the previous year.

35. It is not possible to report any marked improvement in the general economic conditions of the agriculturists as compared with the previous year. The prices of most agricultural produce remained at a low level with a corresponding continuation of lack of purchasing power among the cultivators in practically all divisions of the Province.

W. J. JENKINS,
Director of Agriculture.

No. P. 11 of 1940.

From

W. J. JENKINS, Esq.,
M.A., B.Sc., C.I.E., I.A.S.,
Director of Agriculture,
Bombay Province, Poona

To

THE SECRETARY TO GOVERNMENT,
Revenue Department, Bombay.

Poona, 7th October 1940.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay Province for the year ending 31st July 1940.

I have the honour to be,
Sir,
Your most obedient servant,

W. J. JENKINS,
Director of Agriculture.

SEASON AND CROP REPORT OF THE PROVINCE OF BOMBAY FOR THE YEAR 1939-40.

CHAPTER I—CHARACTER OF THE SEASON.

1. **General.**—From the agricultural stand-point, the year 1939-40 was fair over the greater part of the Bombay Province but judged by crop results, it was less satisfactory than the preceding one. The outstanding features of the season were the prolonged breaks in the rains during the main crop growing period and unduly early cessation of the monsoon. Rainfall in June was deficient while the precipitation received in July and August was inadequate, irregular and unevenly distributed both as regards periodicity of fall and area. There was a prolonged drought from about the middle of July till the middle of August. This check in the monsoon resulted in a serious setback to *kharif* crops which, in many places, were retarded in growth and development. Accordingly, crop prospects in the early part of the season were uncertain, especially in North Gujarat and the eastern regions of the South Deccan and Karnatak. In some areas of these tracts crops failed wholly or partially and scarcity conditions were feared. The opportune and welcome rains which occurred over almost the entire Province in the latter half of August and in the first fortnight of September relieved the situation appreciably, in many areas saving crops from complete failure. These rains also facilitated and expedited *rabi* sowings and gave promise of a successful *rabi* season. Unfortunately the inadequacy and sporadic nature of later rains, combined with other adverse factors such as the prevalence of dry easterly winds, occasional cloudy weather conditions, increased incidence of insect pests and plant diseases etc., falsified these hopes and resulted in a reduction of *rabi* crop outturns in most areas. Accordingly, as a whole, the season under review may be termed disappointing over large tracts of the Province especially in the northern areas of Gujarat and the eastern parts of the South Deccan and Karnatak where prolonged and untimely breaks in rains resulted in deterioration of crops and scarcity of water and fodder in many areas.

The characteristic features of the season under review may be summarised briefly as follows :—

(*a*) Light ante-monsoon showers in the Karnatak, Satara district in the Deccan and Kanara district in the Konkan, while rainfall in June also below normal over most of the Province except in the Konkan where up to requirements.

(*b*) Fairly substantial and widespread rain in Konkan in July, August and September. Elsewhere in the Province rainfall only in the first fortnight of July, second fortnight of August and the early part of September with light and scattered showers during the rest of the period. Karnatak, however, recorded some beneficial rain in the latter half of September.

(*c*) October rainfall satisfactory in many areas in the Karnatak and South Konkan but generally below normal elsewhere in the Province and practically absent in Gujarat.

(*d*) Useful rain in November over most of the Deccan, Karnatak and Konkan, only in the first week and in some areas in the Karnatak and Kanara district also during the third week of the month. Practically no rain in Gujarat except for some local showers in south on the first four days of the month.

(*e*) In December scanty and irregular showers in the North Deccan on 2 or 3 days in the middle of the month; while light rain in Gujarat, North Deccan and North Konkan in January and in South Gujarat, Deccan and Konkan in the first week of February. In March light to fair rain mostly in Gujarat, North Deccan and North Konkan. Rainfall was practically absent in these months elsewhere in the Province.

There were as usual intermittent attacks of stem-borer, caterpillars, koleroga, field rats, grasshoppers and other insect pests and plant diseases in various parts of the Province varying in extent and intensity. Dry easterly winds prevailed from December onwards in the eastern parts of the Karnatak.

Details regarding the season in its various aspects in different divisions of the Province are described in the following paragraphs.

2. **Distribution of Rainfall.**—Statement I (pages 30-31) compares the rainfall during the year under review with the average annual fall of rain at each representative station in the Province. The average rainfall figures for each station have been supplied by the India Meteorological Department.

Kharif Rains.—The Kharif rains during the season under report were somewhat above the average at Broach (Broach and Panch Mahals) in Gujarat, Belgaum, Bijapur and the hilly tracts in the Karnatak and Ratnagiri in the Konkan. At all other district headquarter stations in the Province including the hilly tracts in the Deccan these rains were much below the average usually received.

Rabi Rains.—These were also much below the average everywhere in the Province except at Bijapur in the Karnatak and Karwar (Kanara) in the Konkan where they were in excess of the normal.

Hot Weather Rains.—These presented features of no special importance during the season under review.

Nature of the season in different divisions.

3. **Gujarat.**—The antemonsoon showers were totally absent. Rainfall in June was only light to moderate and sowings had to be postponed to July when fairly widespread rains were recorded throughout the whole division in the first fortnight and sowings

were started on a general scale. Excepting in the Surat district, however, the aggregate rainfall in the division was much below requirements. Besides, the untimely break that occurred from the middle of July till the 20th of August seriously impeded field operations and caused deterioration in the growth of crops. Scarcity of water and fodder prevailed in the northern areas of the division and it was evident that if the rainfall continued to hold off longer crops in many parts would suffer severely. Generally speaking the situation in the Surat district was comparatively better as the precipitation in this tract was more evenly distributed but, even here, more rain was necessary to facilitate transplanting operations. The opportune and fairly substantial rain received in the last week of August and in the first week of September helped to revive crops to some extent while field operations were recommenced in most parts. Rain again ceased at the middle of September and a second drought period ensued which lasted throughout the winter months. As a result standing crops showed poor development and were withering especially in the northern parts due to insufficiency of soil-moisture and inadequacy of water supply in irrigation sources. Paddy suffered most and practically failed in some areas. The early sown cotton in the extreme north of the division also proved a failure in many tracts. Shortage of soil moisture coupled with inadequate dewfall hastened the ripening and opening of bolls and the picking of the crop was undertaken somewhat earlier indicating an early season for the crop. The season, on the whole, was unsatisfactory and necessitated liberal grants of suspensions and remissions in some areas.

The season under review was generally free from insect pests and plant diseases of a serious nature. Irrigated wheat was damaged by field rats in parts of the Broach and Panch Mahals district while *kharif* jowar was affected by " ratado " disease on the coastal tract of Jalalpur taluka in the Surat district. Groundnut was attacked by white ants in a few places in the Kaira district. Caterpillars were reported to have damaged standing crops in some areas in the division.

North Deccan.—There was no rain in the division during the pre-monsoon period. Rainfall in June was insufficient for general *kharif* sowings which were restricted to centres of favourable rainfall. July brought substantial and fairly widespread rain over the greater part of the division and consequently *kharif* sowings were undertaken on an extensive scale while the young germinated crops were in a flourishing condition. Weeding of cotton and other *kharif* crops was in progress and in places transplantation of rice was also commenced. Rainfall in the second half of July and the first three weeks of August was light with occasional breaks and crops in many parts showed signs of retardation of growth due to lack of adequate soil moisture. Rainfall in the last week of August and the first fortnight of September had a reviving effect on the crops which began to grow with renewed vigour. These rains also stimulated *rabi* sowing operations which were progressing extensively under the moderate rains of October and the seedlings,

where germinated, throve well. Rainfall in November was confined to the first four days while the subsequent winter months recorded only light and scattered showers which helped the late crops in their growth. In the absence of any insect pest and plant disease of a serious nature *rabi* crops attained successful maturity and returned fairly satisfactory yields.

No insect pest or plant disease of a serious nature was reported from this division during the year under report. Spotted boll worn on Jarilla cotton was noticed in places in the Khandesh area affecting the opening of bolls. Sugarcane was affected by stem-borer to some extent while smut was observed on *kharif jowar* in places in the division. Rust attack on wheat was reported from the Sakri taluka of the West Khandesh district. Standing crops were damaged to some extent by caterpillars in parts of the Nasik district. The usual downy mildew appeared on grape-vines in Nasik area but the pest was controlled by dusting.

South Deccan.—There were no ante-monsoon showers over the major portion of the division. The regular monsoon started about the second week of June but the rainfall during the month was barely enough for general *kharif* sowing operations which were accordingly confined to favourable localities mostly in the west. July rainfall was generally favourable for field operations and crop growth although it proved somewhat heavy in parts of the Satara district and had a damaging effect on crops. Towards the end of July and in the first half of August, however, rainfall was light and irregular in the west while it was practically absent in the eastern parts of the division. This gave a setback to the progress of crops which, on the lighter types of soil, showed signs of withering and on heavy types of soils remained stunted in growth. Precipitation in the second fortnight of August and in the first week of September was satisfactory in the areas adjoining the Western Ghats and considerably improved crop conditions. In the eastern tracts, on the other hand, viz. parts of Ahmednagar, Poona and Satara districts and practically the whole of the Sholapur district the rainfall was far short of normal requirements of crops which began to wither for want of adequate soil moisture. Rainfall in the second half of September appreciably improved the situation and provided ample moisture for *rabi* cultivation. Rainfall in October was again deficient and more was needed to accelerate *rabi* operations and to promote normal growth of the crops already sown. November recorded rainfall on the first four days but there was practically no rain thereafter except for a few light showers in February. As a result, late crops did not show satisfactory growth especially in the eastern areas and were considerably reduced in yields.

With regard to insect pests and plant diseases in the division sugarcane suffered from attacks of grasshoppers and stem-borer in places in the Satara district and from grasshoppers in some areas on the Godavari and Pravara Canals. Cotton was affected by wilt and aphis on the canal areas. Damage to crops by field rats was reported from the Sholapur district and from the Nira and

Godavari Canals and by various insect pests from other centres of the division. Rice and *kharif jowar* suffered in many areas of the division from attacks of "army worm" caterpillars while *bajri* was affected in places by blister beetles during the flowering stage. The *rabi jowar* crop was affected by "Khairya" disease (Scab mite) in the Ahmednagar district. The same crop suffered from sugary disease (chikta) in the eastern parts of the Poona district and in some areas of the Sholapur district and from smut in parts of the Satara district. The disease "Haldya" appeared in the Ahmednagar district on a small scale. Potatoes were affected by "Tambera" to some extent while tobacco suffered from cut-worm and stem-borer attacks in some areas in the division. Stray cases of black smut attack on wheat were reported from the Ahmednagar district.

Karnatak.—There were light to fair ante-monsoon showers in many parts of the division and the regular monsoon set in by about the second week of June. Precipitation from June to September was generally favourable in the west, excepting in some low lying areas in the Belgaum district, where the rainfall in July and at the end of August proved excessive and crops suffered somewhat from stagnation of water. September rains also stimulated *rabi* sowing operations. In the eastern tracts of the division, comprising practically the whole of the Bijapur district and the talukas lying on the eastern border of the Dharwar district, the rainfall from June till the middle of September was very deficient and this condition checked the growth of crops which, in some areas, were withering due to inadequate moisture in the soil. Rainfall in the latter half of September, however, benefited crops considerably and enabled the cultivators to commence normal field operations. Rainfall in October was recorded over most of the division but the heavy rains received in the latter half of the month caused suspension of field operations and damage to crops in some places. Otherwise the outlook during the month in the division was, on the whole, fairly satisfactory. Harvesting of early sown crops was progressing generally while *rabi* sowings were in brisk progress and the crops already sown throve well. Some useful rain occurred in November, but the rainfall ceased thereafter. Crops fared well in the west but suffered in the east on account of deficient rainfall coupled with the prevalence of adverse dry easterly winds and occasional cloudy weather conditions. The season, on the whole, was fairly satisfactory in the west and moderate to fair in the east.

In addition to the dry easterly winds and cloudy weather conditions referred to above, standing crops were damaged by grass-hoppers in various parts of the division. Caterpillars were reported from places in the Dharwar district. Rice and sugarcane were attacked by "army-worm" caterpillars and *kharif jower* by grass-hoppers in many parts of the Belgaum district. Wheat was affected by rust in places in the Belgaum and Dharwar districts and *jowar* by smut and borer, rice by black beetle and groundnut by "Tikka" in many places in the division. Cotton suffered rather

seriously from "Rhyzoctonia" in the Dharwar district due to excessive soil-moisture. Aphis on Kumta and Jayawant cottons and red-leaf blight on Dharwar-American and Gadag No. 1 cottons were observed in some areas. Standing crops were damaged to some extent by insects and locusts in places in the Belgaum district and by field rats in many parts of the Bijapur and Dharwar districts.

Konkan.—The ante-monsoon rains were practically absent in this division. The rainy season commenced in the first week of June both in the coastal and upghat talukas and the precipitation in this month, as also in July, being favourable, sowing operations were in full swing and transplanting was also in progress although, in some areas, more rain was necessary for the latter operation. Rainfall in the first fortnight of August was received in light amounts and in consequence crops on shallow soils began to show signs of withering and transplantation of rice was retarded. The situation was considerably relieved by the substantial and wide-spread rain received during the latter half of August and in the first week of September. Crops improved in vigour and growth as a result. The early sown crops were nearing maturity and their harvesting was commenced in some localities. Light and scattered showers received in the latter half of September had an adverse effect on the late rice and nagli crops but the rainfall and climatic conditions in the following two months, viz. October and November, were generally favourable for the successful growth of crops. However, the heavy showers received in October proved somewhat injurious to standing crops and to those being harvested along the coastal tract in the southern areas. Garden crops progressed satisfactorily except that the heavy rains about the middle of August and at the end of October were harmful to the betelnut crop as they encouraged the spread of "Koleroga". Thereafter, the activity of the monsoon declined, there being only sporadic and local showers in the division. All the standing crops including garden crops, however, throve well and returned fairly satisfactory yields.

With regard to insect pests and plant diseases "Koleroga" appeared as usual in betelnut gardens in the Kanara district. Standing crops of rice, nagli and vari were attacked by caterpillars in the Ratnagiri district while rat damage to crops was reported from certain talukas in the Kanara district. Damage to rice by stemborer was reported from places in the north of the division. Kanne pest (black smut) appeared sporadically on the late rice crop in the Kanara district, while red rot was noticed in certain types of thick sugarcane in some areas. Wild elephants caused damage to crops in some talukas of the Kanara district.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Statement II, pages 32-38.)

4. **Number of Villages.**—The total number of villages in the Province (22,846½) dropped by six. A noticeable change occurred

in the Ahmednagar District where four villages in Kopergaon taluka and one in Nagar taluka were amalgamated with the adjoining villages for administrative convenience. In Thana district there was a decrease of one village due to the amalgamation of two villages into one.

Total Area and Reporting and Non-reporting Area.

5. **Total area.**—The total area showed a slight decline of 1,438 acres. This was mainly accounted for by a decrease of 1,701 acres in the Thana district, 519 acres in the Ahmednagar district and 254 acres in the Broach and Panch Mahals district due to proper adjustments and corrections in survey records. Against the above decline, there was an increase of 1,072 acres in Kaira district owing to some land from the Baroda territory being added to the British territory in Borsad taluka.

6. **Reporting area.**—The total area for which statistics are regularly collected and reported in the Province rose by 16,149 acres. The most noticeable increase occurred in Dharwar District (16,392 acres) due to the classification of the area as " Surveyed " which was previously shown as " Unsurveyed ".

7. **Non-reporting area.**—The variations under this head generally correspond with those under " Reporting Area " referred to above and hence call for no remarks.

Cropped Areas.

8. **Gross and Net Cropped Areas.**—In the Province, both the gross and net cropped areas decreased by 1·9 per cent. as compared with the previous year. The gross cropped area showed a decline of 326,623 acres from 29,740,000 acres in 1938-39 to 29,414,000 acres in 1939-40 or by 1·1 per cent. and the net cropped area a decrease of 239,000 acres, from 28,779,000 acres in 1938-39 to 28,540,000 acres in 1939-40 or by 0·8 per cent. The fall in area was noticeable in most of the districts of Gujarat, the Deccan, and the Konkan as a result of insufficient and irregular rainfall. There was a slight increase in area in the Karnatak.

9. **Twice cropped area.**—This showed a decline of 87,000 acres or by 9·1 per cent. as compared with the previous year, having fallen from 961,000 acres in 1938-39 to 874,000 acres in 1939-40. The decrease was specially marked in Gujarat (−79,000 acres) and the Deccan (−16,400 acres). There was however, an increase in the area (+11,000 acres) in the Karnatak due to improved water facilities.

10. **Assessed and Unassessed Areas.**—These remained almost stationary as compared with the previous year, the former showing an increase of only 7,000 acres i.e. from 33,481,000 acres in 1938-39 to 33,488,000 acres in 1939-40 and the latter a fall in area of 9,000 acres i.e. from 293,000 acres to 284,000 acres.

11. **Temporary cultivation in Forest lands and culturable waste.**—An area of about 141,000 acres of forest land was given out for temporary cultivation mainly in the Deccan (108,000 acres) and Konkan (28,000 acres) while about 103,000 acres of culturable waste or "other uncultivated land excluding current fallows" mainly in the Deccan 93,000 acres and in Konkan (5,800 acres) were similarly dealt with.

CHAPTER III—CROPPED AREA.

(Statement III, pages 40-61.)

12. **Variations in Cropped Area.**—The main features of the season and its effect on the area and yield of crops have been described elsewhere in the report. Appendix B (page 25) shows the effect of the season under review and the areas sown as compared with the *average* (of ten years from 1928-29 to 1937-38) and the preceding year's area under the principal crops.

13. **Food Crops.**—The area under food crops i.e. cereals, pulses, sugarcane, and fruits and vegetables declined by 1·3 per cent. below the previous year but showed an increase by 1·5 per cent. over the average of the last decennium. Among the main food crops, *jowari* and *bajri* showed an appreciable increase in area in Gujarat and the Deccan but, in the Karnatak, the area under *bajri* fell by 223,000 acres while, under *jowari*, it showed an increase of 62,000 acres. The area under rice and wheat fell by 155,000 acres and 175,000 acres or 7·7 per cent. and 9·4 per cent. respectively when compared with the previous year. The area under gram declined by 13·1 per cent. while sugarcane showed an appreciable increase by 31·6 per cent.

14. **Non-food Crops.**—The area under non-food crops, which include cotton, tobacco and oil seeds, showed a slight decrease of 0·5 per cent. below the previous year but an increase of only 0·1 per cent. when compared with the average of the preceding decennium. Though there was a slight fall in the area under this head as a whole, the area under tobacco showed an increase of 18·1 per cent. and 20·4 per cent. respectively over the previous year and the decennial average and under cotton, of 0·6 per cent. over the previous year but a decline below the decennial average by 6·5 per cent. The area under oil-seeds advanced by 0·6 per cent. and 38·8 per cent. respectively over the previous year and the average of the past ten years.

The net result of these variations in the food and non-food crops as noticed above, was that the total area showed a decrease of 326,000 acres or 1·1 per cent. as compared with the previous year although there was an increase of 315,000 acres or 1·1 per cent. as compared with the decennial average of the past ten years.

15. **Kharif and Rabi areas.**—The following table compares the areas under the *kharif* and *rabi* crops of the year under report with those of the preceding two years :—

(Area in thousand of acres).

Details.	1937-38.			1938-39.			1939-40.		
	Cereals.	Pulses.	Total Cereals and pulses.	Cereals.	Pulses.	Total Cereals and pulses.	Cereals.	Pulses.	Total Cereals and pulses.
	Acres.	Acres	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif ...	9,662	1,873	11,535	10,281	1,993	12,274	9,995	1,891	11,886
Rabi ...	7,761	885	8,646	7,133	872	8,005	7,303	763	8,065
Total ...	17,423	2,758	20,181	17,414	2,865	20,279	17,298	2,654	19,951

It will be seen from the above table that the *kharif* area during the year under report showed a decrease of 388,000 acres below the *kharif* area of the last year (1938-39) but an increase of 351,000 acres over the year previous to the last (1937-38). The *rabi* area exhibited an increase of 60,000 acres over the last year (1938-39) but declined by 581,000 acres when compared with the year before the last (1937-38). The net result of these variations was that the total area under cereals and pulses decreased by 328,000 and 230,000 acres respectively below the area under these crops during the last year (1938-39) and the year previous to the last (1937-38).

16. **Variations under Principal Crops.**—The detailed remarks given below explain the variations under the principal crops.

Jowari and Bajri.—The sub-joined table compares the extent of variations in area under these staple crops in the different divisions of the Bombay Province :—

(Area in thousands of acres).

Division.	Jowari.									Bajri.		
	*Average.			1938-39.			1939-40.			*Average.	1938-39.	1939-40.
	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.			
	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres
Gujarat ...	471	155	626	470	191	661	669	153	822	323	346	413
Deccan ...	859	4,154	5,013	831	3,891	4,722	907	3,903	4,810	2,963	3,159	3,321
Karnatak ...	1,076	1,390	2,466	1,240	1,105	2,345	1,011	1,397	2,408	403	748	524
Total Bombay Province ...	2,406	5,699	8,105	2,541	5,187	7,728	2,587	5,453	8,040	3,689	4,253	4,258

* Average of the decennium 1928-29 to 1937-38.

It will be seen from the above table that the area under *jowari* and *bajri* showed an increase over the last year of 312,000 and 5,000 acres or by 4·1 and 0·1 per cent. respectively but when compared with the decennial average *jowari* showed a decline of 65,000 acres or by 0·8 per cent. while the area under *bajri* rose by 569,000 acres or by 15·4 per cent. There was a general increase in area under *jowari* in the Province but in the case of *bajri* the increase was marked in Gujarat and the Deccan while in Karnatak the area fell by about 223,000 acres due to want of timely rain.

Rice.—The area under this crop decreased by 155,000 acres, i.e. from 2,015,000 acres in 1938-39 to 1,860,000 acres during the year under review or by 7·7 per cent. The most noticeable decline in area was in Gujarat where it was as much as 154,000 acres as a result of insufficient rain in the beginning of the season.

Wheat.—The area under wheat declined by 175,000 acres or 9·4 per cent. as compared with the previous year. The decrease was shared by almost all the districts in the Province, the most noticeable fall in area being in the Deccan (−128,000 acres) as a result of deficiency of late season rains over most of the rabi areas occupied by this crop.

Oil-seeds.—The area under oil-seeds rose by only 15,000 acres or 0·6 per cent. over the previous year but showed a considerable increase of 701,000 acres or 38·8 per cent. as compared with the decennial average. The area under groundnut crop showed an increase of 80,000 acres against a decrease of 52,000 acres under sesamum as compared with the previous year.

The following table and the appended remarks explain the variations in area under the principal oil seeds as compared with the previous year.

Increase or decrease in thousands of acres as compared with the last year.

Oil-seeds.	Increase or decrease as compared with last year.
1. Linseed	−2
2. Sesamum	−52
3. Rape and Mustard	+3
4. Groundnut	+80
5. Castor-seed	−5

Groundnut.—The area under this crop as already stated above rose by 80,000 acres or 5·6 per cent., i.e. from 1,436,000 acres in 1938-39 to 1,516,000 acres in the year under report. The increass was shared by the Deccan (+29,000 acres) and Karnatak (+83,000 acres). Against this there was a decline of (−32,000 acres) in Gujarat due to more area being sown under other *kharif* crops.

Sesamum.—The area under sesamum decreased by 52,000 acree from 210,000 acres in 1938-39 to 158,000 acres in the year under review. The decrease was shared by all the Divisions in the Province.

Castor-seed.—The area under this crop showed a decline of 5,000 acres as compared with the previous year. The fall in area was noticed in almost all the districts in the Province except at Ahmedabad (+3,100 acres) in Gujarat and in Dharwar (+400 acres) in Karnatak.

Linseed.—There was a fall in area under this oil-seed crop of 1,500 acres in the Province as a whole, the decrease being most marked in the Ahmednagar district (−7,000 acres). Against this there was an increase of about 5,000 acres in the Karnatak.

Rape and Mustard.—These oil-seeds are of minor importance and their cultivation is mainly restricted to North Gujarat. The area rose by about 3,000 acres, as compared with the previous year, the increase being marked in the district of Broach and Panch Mahals (+6,000 acres). Against this there was a decrease in area in Ahmedabad district (−3,700 acres).

Cotton.—The area under cotton showed a slight increase of 23,000 acres or 0·6 per cent. from 3,699,000 acres in 1938-39 to 3,722,000 acres in the year under report. The increase was marked in Gujarat (+39,000 acres) and in the Karnatak (+197,000 acres) while in the Deccan there was a decline in area of as much as 213,000 acres, the decrease being general in all the districts as a result of trade depression.

Sugarcane.—The area under this crop expanded by 24,000 acres or 31·6 per cent. from 76,000 acres in 1938-39 to 100,000 acres during the year under report. The increase was general throughout the Province, the Deccan accounting for an increase of 21,000 acres.

Tobacco.—The acreage under tobacco showed an increase of 28,000 acres or by 18·1 per cent. from 155,000 acres in 1938-39 to 183,000 acres in the year under report. The increase was most marked in Kaira district (+25,000 acres) in Gujarat and in Satara district (+2,800 acres) in the Deccan.

Fruit and Vegetables.—The area under these crops showed a small rise of 3,000 acres as compared with the previous year. The increase was chiefly marked in Gujarat (+1,300 acres) and the Karnatak (+2,300 acres) against a fall in area of about 1,000 acres in the Deccan.

17. Appendix C (pages 26-27) shows as usual the distribution (in each district of the Province) of the principal food and non-food crops in terms of percentage of the gross cropped area.

CHAPTER IV—IRRIGATED AREA.

(Statements IV, pages 62-79 and IV-A, pages 80-83)

18. **Variations in the irrigated area and crops.**—Appendix D, (page 28) exhibits variations under the several heads of irrigation and crops irrigated as compared with similar details of the previous year.

19. **Area irrigated.**—This showed a slight expansion of 68,000 acres or 5·9 per cent. as compared with the previous year, having increased from 1,147,000 acres in 1938-39 to 1,215,000 acres in the year under report. The increase was chiefly noticeable in Gujarat (+22,000 acres) and in Dharwar district (+47,000 acres) in the Karnatak, and in parts of the Deccan (+33,000 acres). Against the above, there was a fall in area of (−11,000 acres) in Ahmednagar district (−12,000 acres) in the Satara and Sholapur districts in the Deccan and (−11,000 acres) in the districts of Belgaum and Bijapur in the Karnatak.

20. **Area irrigated from different sources of irrigation—Government Canals.**—The area irrigated under Government Canals showed an increase of 39,000 acres or 15·5 per cent. when compared with the previous year. The increase was most marked in the Karnatak (+35,000 acres). The Deccan showed an increase of about 6,000 acres against the same amount of reduction in the area in Gujarat owing to insufficient rain.

Private Canals.—Irrigation from private canals showed a decline of 9,000 acres or 10·3 per cent. from 87,000 acres during previous year to 78,000 in the year under review. Almost the whole of this decrease took place in the Deccan, except in the district of Nasik

where there was an increase of 3,000 acres. In the Karnatak and the Konkan, irrigation by private canals remained almost stationary while in Gujarat irrigation from this source was practically absent.

Wells.—Well irrigation extended by 32,000 acres or 4·6 per cent. when compared with the previous year. Except in the Karnatak, Sholapur district in the Deccan and Ratnagiri district in the Konkan, where there were declines in this area, the increase was shared by almost all the districts in the Province, as, owing to deficient rains, greater need was felt to resort to this source of irrigation.

Tanks.—The area irrigated by tanks showed a slight increase of 3,000 acres or 2·9 per cent. only when compared with the previous year. The increase was of 5,000 acres in the Deccan and 9,000 acres in the Karnatak against a decrease of 7,000 acres in Gujarat and 4,000 acres in the Konkan.

Other Sources.—The area under other sources increased by 4,000 acres or 19·0 per cent. chiefly in Gujarat and the Karnatak, from 21,000 acres in 1938-39 to 25,000 acres in the year under report.

21. **The ratio of the irrigated area to the net cropped area.**—This was 4·3 per cent. during the year under review. Out of this Government Canals represent 1·0 per cent., private canals 0·2 per cent., wells 2·7 per cent., tanks 0·3 per cent. and other sources of irrigation 0·1 per cent.

22. **Crops irrigated.**

Rice.—The area under irrigated rice increased by 32,000 acres or 18·6 per cent. when compared with the previous year. The increase was chiefly in the Deccan (+2,600 acres) and the Karnatak (+46,000 acres) but there was a fall in this area (−17,000 acres) in Gujarat due to insufficient water supply in irrigation sources.

Wheat.—The area under irrigated wheat was almost stationary when compared with the previous year. The only noticeable change was that Gujarat showed an increase of 16,000 acres against the same amount of reduction in this area in the Deccan.

Jowar.—The area under irrigated *jowar* rose by 20,000 acres or 7·8 per cent. over the previous year. The increase was almost general in the Province, except in the Ahmednagar and Belgaum districts, where there was a slight fall in the area due to extended cultivation of sugarcane.

Bajri.—Irrigated *bajri* also showed an increase of 9,000 acres or 12·5 per cent. as compared with the previous year. The increase was almost general in the Province except in the Ahmednagar district in the Deccan, where there was a fall in area due to greater area being sown under non-irrigated *bajri* owing to favourable early rains.

Cotton.—The area under irrigated cotton showed a rise in area of 6,000 acres or 17·1 per cent. as compared with the previous year. There was an increase of 10,000 acres in Gujarat but the Deccan showed a decrease of 4,000 acres due to increase under other crops and also to trade depression.

23. **Sugarcane.**—As already noted when dealing with the crop in Chapter III, the increase of 24,000 acres or 32·0 per cent. in the area under sugarcane during the year under review was mostly in the South Deccan and was due to greater facilities of canal irrigation and to the extended cultivation of this crop by sugar factories.

CHAPTER V—OUTTURN OF CROPS.

(Statements V, pages 84-85 and V-A, pages 86-100)

24. **Yield of Principal Crops.**—Statement V (pages 84-85) shows the estimated yield of the principal *kharif* and *rabi* crops taking 100 as representing the normal. It is prepared from the district estimates which are returned in annas on the basis of twelve annas denoting the normal crop. The figures are, therefore, only approximate. The character of the season has already been described elsewhere in the Report.

25. **Outturn of crops in parts of the normal.**

A.—Kharif Crops—

Jowar.—The outturn of *kharif jowar* was 58 per cent. of the normal in the Karnatak. It was between 60 and 75 per cent. of the normal in the Kanara district in the Konkan and in the Deccan except in the Poona district where it was only 52 per cent. of the normal. In Gujarat the outturn was below 50 per cent. except in the Surat district where it was 80 per cent. of the normal.

Bajri.—The yield of the crop ranged from 60 to 75 per cent. of the normal in the Deccan except in the Sholapur district where it was only 35 per cent. of the normal. In Gujarat, the outturn was 77 per cent. of the normal in the Surat district and 58 per cent. of the normal in the Broach and Panch Mahals district, but, in the remaining districts of the division it was below 43 per cent. of the normal. In the Karnatak, it was 53 per cent. in the Belgaum district and 67 per cent. in the Dharwar district but only 42 per cent. of the normal in the Bijapur district.

Rice.—Except in Gujarat where the outturn was rather poor being below 33 per cent. of the normal, it ranged between 67 and 80 per cent. of the normal in the Deccan and the Karnatak except in the Sholapur district where it was only 48 per cent. of the normal.

Cotton.—The outturn of the late varieties of cotton was between 58 and 79 per cent. of the normal in Gujarat and the Karnatak except in the Ahmedabad district where it was only 34 per cent. of the normal. In the Deccan, where early varieties are cultivated,

the yield of the crop ranged between 65 and 77 per cent. of the normal except in the Nasik and Ahmednagar districts where it was 83 per cent. of the normal.

Sesamum.—This oil seed yielded between 58 and 83 per cent. of the normal throughout the Province, except in the Broach and Panch Mahals district and the Bijapur district where it was only 50 per cent. and the Ahmedabad, Kaira and Sholapur districts where it was rather poor and was below 33 per cent. of the normal.

26. **B.—Rabi Crops.—**

Jowar (Rabi).—The *rabi jowar* was 58 per cent. of the normal in the Karnatak and between 52 and 75 per cent. of the normal in the Deccan. In the Surat and Thana districts the yield varied from 80 to 83 per cent. of the normal while it was below 50 per cent. of the normal in the remaining three districts of Gujarat.

Wheat.—Except in the Surat district, where the yield was 82 per cent. of the normal, yields ranged between 43 and 51 per cent. in the rest of Gujarat. In the remaining part of the Province, the outturn was between 56 and 79 per cent. of the normal.

Gram.—In the Deccan, the Karnatak and the Konkan, the outturn was between 58 and 83 per cent. of the normal, except in the Poona and Sholapur districts, where it was less than 56 per cent. of the normal and in the Kolaba district where it was 92 per cent. of the normal. In Gujarat, the yield of the crop was 63 and 50 per cent. of the normal in the Surat and Broach and Panch Mahals districts respectively but it was below 33 per cent. in the Ahmedabad and Kaira districts.

Tobacco.—The outturn of the crop ranged between 58 and 75 per cent. of the normal in the Province except in North Gujarat and Sholapur district in the Deccan where it was below 49 per cent. of the normal.

Linseed.—The cultivation of this oil-seed is almost exclusively confined to the Deccan and the Karnatak. In the former tract, the outturn ranged from 58 to 75 per cent. of the normal, except in the Poona and Sholapur districts where it was only 50 per cent. and between 58 and 67 per cent. of the normal respectively.

Rape-seed and Mustard.—In the Deccan and Karnatak, the outturn of these oil-seeds ranged from 58 to 75 per cent. of the normal but, in Gujarat, only Broach and Panch Mahals district gave 67 per cent. while in the remaining districts of this division it was below 51 per cent. of the normal, the yield at Ahmedabad being only 33 per cent. of the normal.

Sugarcane.—The outturn of sugarcane varied from 67 to 92 per cent. of the normal in the whole of the Province except in the Ahmednagar district where it approached the full normal.

OUTTURN OF FOOD GRAINS AND COTTON.

27. **Crops.**—Statement V-A (pages 86-100) compares the acreage under food grain crops (cereals and pulses) in each district

of the Province and their approximate outturn in tons during the year under report with similar statistics for the two preceding years.

The following table sums up the results :—

Division.	Area in thousands of acres.			Outturn in thousands of tons.		
	1937-38.	1938-39.	1939-40.	1937-38.	1938-39.	1939-40.
	Acres.	Acres.	Acres.	Tons.	Tons.	Tons.
Gujarat	2,453	2,490	2,324	692	608	417
North Deccan	3,714	3,779	3,783	748	745	714
South Deccan	7,532	7,423	7,513	1,000	1,055	984
Karnatak	4,867	4,973	4,726	631	859	834
Konkan	1,615	1,614	1,605	678	632	541
Total, Bombay Province ...	20,181	20,279	19,951	3,749	3,399	3,490

It will be seen from the above table that both the area and outturn of the food grain crops declined by 1·6 per cent. and 10·5 per cent. respectively as compared with the previous year. This decrease was chiefly marked with regard to area in Gujarat and the Karnatak but, in regard to yield, the fall was general throughout the Province, Gujarat suffering most as a result of adverse seasonal conditions.

Cotton.—As regards the actual outturn of cotton as estimated by the number of bales, it may be stated that, so far as the area factor was concerned, there was a decline in area of 628,000 acres or 10·8 per cent. when compared with the previous year. Thus the total area in the Province including the Indian States stood at 5,195,000 acres during the year under report against 5,823,000 acres in the preceding year (1938-39). The outturn also showed a corresponding reduction of 97,000 bales or 9·2 per cent. below the previous year, thus reflecting the unfavourable character of the season for the crop during the year under review. Of the outturn of 953,000 bales, 434,000 bales or 45·5 per cent. represented the yield of long stapled cotton viz. Broach, Dharwar and Kumpta varieties, while the remaining 519,000 bales or 54·5 per cent. belonged-short stapled varieties of North Gujarat, Western India States Agency and Khandesh. As compared with the previous year the outturn of long staple rose by 2·5 per cent. while that of short staple cotton fell by 38·5 per cent.

CHAPTER VI—PRICES, TRADE AND STOCK.

(Statement VI, pages 102-103).

28. **Prices of Principal Articles.**—Statement VI—Prices—shows the retail prices of the principal staple crops and of fodder, ruling at harvest time at each district head-quarter station in the Bombay Province. The following remarks show major variations in the prices of the principal articles as compared with those of the previous year.

Jowar.—The price of *jowar* ruled dearer at almost all the head-quarter stations in the Province by about three to five and a half seers per rupee except at Broach and Thana where it was higher by three-fifth and one-third of a seer respectively. Only in Dharwar and Kanara, the price was cheaper by one-fifth and two-fifth of a seer respectively.

Bajri.—The price of *bajri* also ruled higher throughout the Province by two and three-fourth to five and three-fourth seers per rupee, Kaira in Gujarat, Ahmednagar and Sholapur in the Deccan and Belgaum in the Karnatak showing the most marked fluctuations of more than five seers per rupee and Bijapur as much as eight and three-fourth seers per rupee. In Ahmedabad and Surat in Gujarat, Nasik in the Deccan and Thana in the Konkan, the increase in price was from one seer to one and three-fourth seers per rupee.

Wheat.—Except in Karnatak, Sholapur in the Deccan and Alibag in the Konkan where the price of wheat ruled easier by half a seer to two and three-fourth seers per rupee, it was dearer by one to three seers per rupee elsewhere in the Province.

Rice.—The price of rice ruled higher by half a seer to two and a half seers per rupee in the Province except at Godhra (Panch Mahals), Jalgaon (East Khandesh), Ahmednagar and Thana where it was cheaper by one-fifth to half a seer per rupee.

Gram.—The price of gram ruled dearer throughout the Province by one and one-fourth to three and a half seers per rupee, only a few stations showing a rise of less than a seer per rupee.

Turdal.—Except at Dhulia (West Khandesh) and Sholapur in the Deccan, Dharwar in the Karnatak, Karwar in the Konkan, where the price of *turdal* was a little cheaper by about one-third of a seer or less, it was dearer elsewhere in the Province by one-fifth of a seer to one and one-fourth seers per rupee. The price in Konkan remained almost stationary.

Gul.—The price of *gul* ruled easier by about one-half seer to three seers per rupee except at Ahmedabad, Kaira and Godhra (Panch Mahals) in Gujarat, Satara in the Deccan and Thana, Alibag and Karwar in the Konkan where it was dearer by one-fifth of a seer to one seer per rupee.

Tobacco.—Except at Sholapur in the Deccan and Belgaum in the Karnatak, where the price of tobacco ruled cheaper by one-fourth of a seer to half a seer per rupee, it was dearer by three-fourth of a seer per rupee at Satara but in the rest of the Province it was almost stationary.

Cotton.—The variations in the area and outturn of this crop as compared with the figures of the last year have already been noted in the respective chapters and hence need no repetition here. The following table compares the prices of the article during the year under report with those of the previous year (1938-39) and the averages of the preceding five years :—

Variety of cotton.	Average of five years ending 1938.		Average of the seven months ending 31st July 1939.		1940.		Variations.	
	Price per *khandi* of 784 lbs.	Price per bale of 400 lbs.	Price per *khandi* of 784 lbs.	Price per bale of 400 lbs.	Price per *khandi* of 784 lbs.	Price per bale of 400 lbs.	Compared with the average in columns 2 and 3.	Compared with the prices in 1939.
1	2	3	4	5	6	7	8	9
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach ...	214	109	163	83	231	118	+7·9	+41·7
Khandesh ...	184	94	141	72	202	103	+9·7	+43·2
Kumta* ...	Not available.		183	93	233	118	Not available.	+27·3

*As it was not found possible to quote above prices of "Saw ginned Dharwar" cottton, this variety being more or less non-existant from the trade point of view, "Kumta" cotton has been substituted since 1936-37. The prices of this variety for the previous years, however, are not available.

It will be seen from the above table that the price of all the three varieties, viz. Broach, Khandesh and Kumta showed an appreciable improvement over those of the previous year and also the averages of the five years ending 1938 in the case of the first two varieties. The rise in prices till February 1940 was mainly due to the outbreak of war and the possibility of increased internal consumption of cotton but the fall thereafter was the result of the discouraging war situation and export difficulties.

The actual fluctuations in the cotton prices will be seen from the following statement which gives the prices in rupees per *khandi* of Broach cotton at Bombay during the year under report :—

Year and month.	Price per *khandi* of 784 lbs.	Year and month.	Price per *khandi* of 784 lbs.
1939	Rs.	1940	Rs.
August ...	168	January ...	267
September ...	182	February ...	267
October ...	.....	March	258
November ...	.....	April	251
December ...	.....	May	226
		June	174
		July	173

Dry Grass.—The price of dry grass ruled dearer by about fourteen annas to a rupee per Indian maund in Gujarat, except at Broach where only it was cheaper by eleven annas. At Nasik in the Deccan and Thana in the Konkan, it was dearer by four and half annas per maund while at Jalgaon, Satara in the Deccan and Ratnagiri in the Konkan it was cheaper by two to four and half annas per maund. In the remaining part of the Province, it was almost stationary.

Jowari Kadbi.—The price of *jowari kadbi* rose by about two to eleven annas per Indian maund in the Province except at Jalgaon (East Khandesh), Poona and Satara in the Deccan, Dharwar in the Karnatak where it was cheaper by two to ten and a half annas per Indian maund.

In the Konkan where rice straw is used in place of *jowari kadbi*, the price of rice straw ruled cheaper by one and a half annas to three annas per Indian maund at Alibag (Kolaba) and Ratnagiri while at the two remaining stations the price of the article was stationary.

CHAPTER VII—AGRICULTURAL STOCK.

Census of Livestock and Agricultural Machinery and Implements.

29. The quinquennial census of livestock and agricultural machinery and implements was held in January 1940 and the result of it is given at length in statement VII (pages 106-205).

Appendix E (page 29) summarises the total strength under each main head during the year under review (i.e., 1939-40) as compared with the last two censuses—1929-30 and 1934-35.

Variations in total number of cattle and buffaloes.—The total number of cattle and buffaloes is now returned at 97·34 lakhs. This is 2·3 per cent. below the figure of 1934-35 but an increase over that for 1929-30 by 3·4 per cent.

Variations under principal heads.—Under the orders of the Government of India, the enumeration of the agricultural stock in the census under review has been done separately for rural and urban areas in each district and is shown in the statement (pages) as revised.

For breeding purposes (bulls and bull-buffaloes).—The total number under this head increased by 2,000 or 3·9 per cent. as compared with the census of 1934-35. The increase was contributed

by almost the whole of Konkan, West Khandesh, Ahmednagar and Satara districts in the Deccan and Bijapur district in the Karnatak and Surat district in Gujarat but, elsewhere in the Province, the number showed a decrease varying from 100 to 1,700 due partly to want of adequate fodder supply and partly to the apathy of the cultivators to maintain stock at additional cost.

For milk production (cows and she-buffaloes).—These showed an increase of 326,000 in number or 11·1 per cent. as compared with the census of 1934-35. The increase was shared by almost all the districts in the Province except Kaira and Broach and Panch Mahals districts in Gujarat, Bijapur district in the Karnatak and Bombay City in the Konkan. The tendency of the people to rear milk cattle on a large scale on account of greater demand for milk and its by-products in the market contributed to the general rise in the number of milch cattle.

Young stock.—The number under this head showed a decline of 183,000 in number or 5·9 per cent. as compared with that of 1934-35. The decrease was shared by many of the districts in the Province except Broach and Panch Mahals district in Gujarat, West Khandesh, Nasik and Satara districts in the Deccan, Dharwar district in the Karnatak and Kolaba and Ratnagiri districts in the Konkan where only there was some increase.

Sheep and goats.—These together showed an advance by 1,162,000 in number or 30·7 per cent. when compared with the census of 1934-35. The increase is marked in almost all the districts in the Province except in Bombay City and Bombay Suburban district only. The increase in Gujarat was mainly due to temporary settlement of wandering tribes from outside the Province but in other divisions it was due to the increasing tendency of the cultivators to rear sheep and goats, as their rearing is both inexpensive and profitable, while at the same time the milk, wool, manure and mutton obtained from them bring in an appreciable return.

Horses and ponies.—The total number under this head slightly increased by 1,000 in number or 0·9 per cent. when compared with the census of 1934-35. The increase is chiefly noticed in Gujarat and the Konkan but in the Deccan and the Karnatak there was a slight decrease due to the introduction of the cheaper and speedier means of transport which are displacing carriages and riding horses.

Ploughs.—The totat numbers of ploughs increased by 92,000 the wooden ploughs showing an increase of 77,000 or 6·7 per cent., the iron ploughs 15,000 or 21·4 per cent. and the tractors only 6 or 3·5 per cent. over the census of 1934-35. This shows that iron ploughs are getting more popular among the cultivators. Against the above increase, there is a decrease in he Ahmedabad district, Bombay City and Bombay Suburban district, which being negligible, calls for no remarks.

Carts.—The number of carts for riding and transport together increased by 26,000 or 3·8 per cent. over the census of 1934-35. The increase is marked in Gujarat, the Karnatak and almost the whole of Konkan and West Khandesh, Nasik and Satara districts in the Deccan due to the increased agricultural activities among small villages.

Sugarcane crushers.—The number of crushers worked by engine power increased by 39 or 6·3 per cent. and those worked by bullocks, by 368 or 3·8 per cent. when compared with similar figures for the census of 1934-35. This shows that greater preference is being given to the use of crushers worked by machanical power over those worked by bullocks.

Oil engines with pumps for irrigation.—The number under this Head showed an increase of 1,264 or 86·6 per cent. over that of the census of 1934-35 and was due to the tendency of the cultivators to make more use of machinery with a view two minimise time, labour and cost of irrigation.

Electrict pumps for tube wells.—There was an increase under this head of 301 in number or 212·0 per cent. over the census of 1934-35 and was due to the increasing tendency of the cultivators to make use of machinery with a view to minimise time and labour.

CHAPTERS VIII AND IX—CONDITION OF THE AGRICULTURAL POPULATION.

30. As already stated in Chapter I of the Report, the season under review was fair over most of the Province and rather disappointing in the northern areas of Gujarat and the eastern regions of the South Deccan and Karnatak. The unsatisfactory nature of the season is reflected in the considerable drop in the estimated outturn of food grains. In North Gujarat and the south-eastern tracts of the Province, which suffered most from the insufficient and unevenly distributed precipitation, scarcity of water and fodder prevailed as most of the food and fodder crops in these areas fared badly and the quantity of grass was also limited. Accordingly, scarcity was declared in some talukas of the Ahmedabad district in Gujarat and scarcity works were started to afford relief to the rayats.

31. So far as the available supply of food grain crops to the general population is concerned, the year under review may be regarded as less satisfactory than its predecessor. The following tabular statement compares the actual acreage sown and the estimated tonnage of food grain crops produced in different divisions of the Province during the years 1938-39 and 1939-40.

Division.	Area in thousands of acres.		Estimated outturn in thousands of tons.	
	1938-39.	1939-40.	1938-39.	1939-40.
	Acres.	Acres.	Tons.	Tons.
Gujarat	2,490	2,324	608	417
North Deccan	3,779	3,783	745	714
South Deccan	7,423	7,513	1,055	984
Karnatak	4,973	4,726	859	834
Konkan	1,614	1,605	632	541
Total, Bombay Province ...	20,279	19,951	3,899	3,490

The above table indicates that, notwithstanding the fact that the area under food grain crops in the Province remained almost the same as last year, the resulting outturn showed a considerable drop in all divisions of the Province.

32. Owing to the uncertain conditions of rainfall and other adverse factors resulting in low crop yields and on account of the effects of the war, the prices of agricultural produce at principal centres in the Province exhibited an appreciable improvement over last year. The prices of both food and cash crops ruled dearer than in the preceding year, except those of rice, which remained stationary as shown in the table below. Due to speculation, there were sharp variations in prices at the outset of the war but the price control orders promulgated by Government exercised a steadying influence over the market and helped to maintain prices at a satisfactory level.

Prices prevailing at harvest time for agricultural produce in seers of 80 tolas per rupee except for cotton which are recorded in rupees per khandi of 784 lbs.

Articles.	Centre.	1935-36.	1936-37.	1937-38.	1938-39.	1939-40.
		Seers.	Seers.	Seers.	Seers.	Seers.

33. The condition of cattle was generally satisfactory. Rinderpest, foot and mouth disease and other animal diseases occurred as usual but did not assume such proportions as to seriously interfere with the normal progress of agricultural operations.

34. Wages of agricultural labour remained generally the same as in the previous year.

W. J. JENKINS,
Director of Agriculture.

TABLE VII

Return of Agricultural Stock (Cattle Census), Implements and Machinery, 1940

U = Urban.

R = Rural.

N.B.—Enumeration has been done separately for rural and urban areas in each district. For this purpose any self-governing urban unit, irrespective of size, including every Municipality, every Cantonment, all Civil Lines not included within the Municipal limits, and also every other continuous collection of houses ordinarily inhabited by not less than 5,000 persons and having an Urban character though not necessarily self-governing has been treated as Urban area and the rest as Rural area.
